Company Introduction

ILLON is a medical aesthetic brand that uses a skin filling system that enhances absorption to the skin, rather than applying cosmetics.

We supply professional cosmetics and equipment to more than 1,500 clinics · hospitals and spa to offline market in Korea. And we are in business to Lotte Duty free shop, Naver store part etc. We also have Korea distributors to Israel cosmetics brands Moraz and GIGI and German cosmetics brand Dr. Spiller.

By participating in domestic and foreign exhibitions in 2018, foreign buyers have confirmed their potential to enter overseas markets through a deal contract and a lot of interest in products, including skin products, which are their main products. Based on the success of the domestic market through sales and distribution know-how in the professional cosmetics market, we are going to start for you in the global market.

SkinJection

Beauty&Health › Beauty › Skincare

SkinJection

SkinJection is a skin care treatment that uses a series of the healing process.

Microneedling creates microscopic holes in the outer and inner layers of the skin. The microscopic holes in the skin heal within a few weeks, the process promotes a healing response in the dermis layer that induces the collagen production to fade the scarring and fine lines, pore tightening, improve the texture of skin and works to rejuvenate overall facial vitality.

SkinJection is basically performed by doctors, professionals as In-office-use due to the reasons such as its depth, treatment method, and infection concern, etc.

The characteristic of SkinJection are as follows

- 1)0.24mm – Home-use depth, less damage on the skin surface, less secondary infection, no redness after treatment
- 2)33gauge – The thickness of needle is thinner than hair thickness. less pain while treatment and no scar remain.
- 3)24needles – 24 needles evenly and regularly spread
- 4)24K gold-plating stainless steel – Minimizing metal allergy
- 5)1-time use – Hygienic and safe for infection
- 6)Sterilization – 100% kill or elimination of all organisms and microbes on the needles through chemical(Ethylene Oxide Gas) sterilization for more than 6 hours
- 7)Airless cylinder – Any posture is possible without dropping down
- 8)Integral system – ampoule integrates with microneedles, the head, charges the active ingredient of the ampoule instantly while stamping
- 9)5ml volume – Sufficient and satisfactory volume for single use
