Company Introduction

All of Loranple products contain GHK Copper Tri-Peptide of 99.1% purity and Argireline, Acetyl Hexa Peptide developed and manufactured by SNU.

GHK Copper Tri-Peptide which is key bio-material of biotechnology is a combined amino acid (basic element of protein) with no side effects. This product stimulates skin rejuvenating and remodeling process as a natural skin wellness and age reversal agent.

We do our best in making safe and reliable product with differentiated R&D and unique technology . Seoul National University's research and develop team has been continuously studying on peptides, the core biomaterial of the biotechnology. These peptides in Loranple's total skin care solution has been verified its excellent effect and stability at the same time by Bundang Seoul National University Hospital. Peptides are distinguished from proteins which is one of the fundamental element of human body, on the basis of size. Peptides is the harmless core biomaterials which format is the combination of amino acids. Peptides are one of the final crystal materials which can come from core Biotechnology of stem cell.
