The Unique Seahorse Cosmetics from pure Jeju Island.

We have been running our business in the cosmetic industry since 2009, and we are the exclusive manufacturer for the Seahorse cosmetics in Korea. We use seahorse from Jeju Island which is certified as seafood by KFDA, and certified by Halal as the safe key ingredient of our products.

The efficacy of Seahorse as the cosmetic ingredient

Seahorse is known as the most expensive traditional Chinese medicine, and the price of Jeju seahorse is 10,000 USD per 1 kg. The former studies for the seahorse as food have focused on antioxidant, blood circulation, and anti-inflammatory efficacy. After we have done the test for the antioxidant efficacy of Jeju Seahorse as the cosmetic ingredient, we have launched seahorse cosmetics for the purpose of anti-aging based on the studies. The key agents which the seahorse has got are

1. Low molecular weight compound 'Peptide'
2. Specific Amino Acids

The key agents('Peptide', 'Specific Amino Acids'), which seahorse has got mainly work as the antioxidant agents.
