

MARATHON

WATCH, WRIST:
GENERAL PURPOSE MECHANICAL
CASE: STAINLESS STEEL

WW194003SS • NSN: 6645-00-066-4279

INSTRUCTIONS

SETTING THE TIME

1. Turn the crown clockwise to wind and start the watch movement while the crown is in the neutral (pushed into the case) position.
2. Pull the crown out.
3. Turn the crown either clockwise or counter-clockwise to set the time while the crown is pulled out.
4. Push the crown into the case once the desired time is set.
The power reserve on a fully wound watch is approximately 40 hours.

NOTE: When the crown has been pulled out to position 2, the second hand will stop. This is used to synchronize and set the time to an accurate reference time source.

WATCH FEATURES

Movement: ETA 2801

Case: 316L Stainless steel

Water Resistance: 3ATM

Illumination: Tritium tubes

IMPORTANT

Wind the watch until pressure is felt while turning the crown clockwise. Please note to turn the crown gently while winding in this way, as winding too fast can damage the gears in the movement. Do not overwind. If the watch will not wind any more, do not force it. Ensure the crown is pushed in completely to ensure the watch is water resistant. Only have the watch serviced by an authorized Marathon service centre, otherwise the warranty will be void.
