

RHT Climate

Relative Humidity and Temperature Transmitter

- / High accuracy readings
- √ Wide backlight display
- √ Configurable analog outputs
- √ Settings via USB or keypad
- √ Alarm output and built-in buzzer

The RHT Climate transmitter incorporates high accuracy and stability sensors for relative humidity and temperature measurement and can transmit both signals through two analog outputs or RS485 Modbus RTU communication.

The device allows complete parameters configuration through the USB interface, simulation of temperature and humidity, forcing the retransmission signals or even diagnostics through NXperience software. RHT Climate has models with or without display for wall or duct mount, with various probe lengths.

Typical Applications

RHT Climate is suitable for general use in HVAC-R applications, that is, monitoring or climate control of environments or even environmental monitoring of industrial processes where robustness, accuracy and connectivity are required.

Temperature Accuracy

Sensor Operation Conditions

The RHT Climate can be configured to display and retransmit the temper or any of its psychrometric properties, calculated in real time:

- Dew Point Temperature
- Wet Bulb Temperature
- Absolute Humidity
- Frost Point Temperature
