HOW TO MEASURE YOUR WRIST?

1

Print out this page having set the scale to 100% in your printing settings.

2

To check if the printout is right, measure the following line with a ruler and make sure it measures exactly 5 cm (1.97").

3

Cut out the sizer along the edge of the continuous line where the scissors are.

4

Make a cut in the dashed line at the beginning of the sizer. You can do this with a cutter or with scissors (very carefully).

5

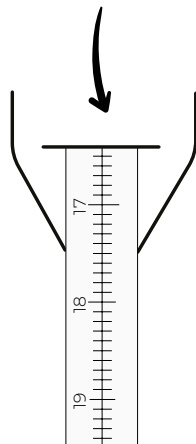

Check your wrist measurement. And once you have the cm, compare it with the perimeter (on the bangles) or the length of the bracelet you want to buy.

You'll find this information on the page of each bracelet on the website.

6

We'll show you an example:

Your wrist is 16.4cm
