

ALL REQUIRED TOOLS

**Alcohol based cleaner
& microfiber towel**

**Sharp blade or
scissors**

Roller

Prepping the Surface

Start by getting all metal surfaces clean from dust, oil, wax and moisture. We recommend using a microfiber cloth and an alcohol based cleaning solution such as denatured alcohol or Invisible Glass. If you have rust, it may require a bit more attention to ensure the material will stick well. Once all the surfaces have been prepped and air dried, you can start applying the material.

Installation

Remove a small section of the backing paper from the foam tape and tack it into place of the area you would like to cover.

Then, cut the strip to your required size and remove the remainder of the backing paper.

Last, press or wrap the adhesive side of the foam tape firmly into place, and repeat this process as needed.
