## SSRINGS-v3 Instructions

Start

Next

Finish

1. Once the door panel is removed, this is an example of what you should see. The speaker now needs to be removed and unplugged to clear the opening.

2. Behind the speakers should be a metal surface that needs to be wiped of any debris like oil, dust, moisture, and etc. The supplied acoustic foam squares are to be applied directly to the metal surface behind the speaker.

3. Once complete, reinstall the speaker and wipe down the surround or trim of the speaker plate. Take one foam strip and measure around the speaker plate as photo shows.

4. Cut to fit with household scissors, tear the white paper back off and apply. It should look like the finished photo and then door panel can be reinstalled.
