

### PACKAGE CONTENTS

- 1 x Light Fitting
- 1 x Pack of Screws

### FEATURES

1. "ON/OFF" Push Button
2. Day-Night Sensor
3. Integrated Solar Panel
4. Sleek Modern Design
5. Durable, Weather-Proof Construction
6. Easy "Screw-In" Wall Mount Bracket
7. 8 hour Charging Time
8. 8 hour Run-Time
9. Cool White LEDs

### INSTALLATION METHOD

1. Remove contents from packaging
2. Locate your desired installation location
3. Remove protective film from lens
4. Switch your light "ON" by pressing the "ON/OFF" switch on the side of the light fitting once. To turn "OFF" press once again. **(Please note; Your light is sent with the button in the "OFF" position)**

"ON/OFF"  
Button

5. Fix your Light Fitting to a wall using the supplied screws (**FIGURE 1 & 2**)
6. Make sure that you situate your fitting in a location where the solar panel will receive maximum direct sunlight throughout the day.

### IMPORTANT NOTES

- **Please ensure you place your Solar Panel in a location where it can achieve a minimum of 8HRS DIRECT SUNLIGHT**
- Be aware that on overcast/cloudy days, the solar panel will still charge. However, not as efficiently as a sunny day, so the battery may not reach full capacity. Therefore, your light may turn off earlier than specified.
- It's best not to install these lights underneath a street light, porch light etc. because this may stop the automatic day-night sensor triggering and result in your lights not turning on

### TROUBLE SHOOTING

Phenomenon	Cause	Inspection Method	Solution
Light won't turn on	Switch hasn't been turned on	Determine what position the switch is in	Turn the switch on
	Battery has run flat	Period of rainy or cloudy weather or installation site doesn't provide enough direct sunlight	Charge the light in direct sunlight for 1-2 days then check again
The light only stays on for a short amount of time	Low Battery	1. Bad installation site for the solar panel 2. Dust or leaves are covering the panel 3. Long period of overcast weather	1. Charge the battery in direct sunlight for 1-2 days with the switch off, then check again 2. Clean the solar panel
		Battery Failure	1. Access the light and & replace battery 2. Battery has matured

### LIGHT MODE

First 5 hours (100% brightness)

After 5 hours - until daylight (25% brightness)

At night, when the solar panel no longer senses daylight, the light will illuminate at 100% brightness for 5hrs. After this your light will drop to 25% brightness for the rest of the night, once the solar panel senses daylight again, the light will turn off. The panel will then charge throughout the day to repeat the process each night.
