What Is A Misting System

A misting system is designed to automatically spray a fine mist through a series of nozzles that are evenly spaced throughout your property. The system can either be installed by a paid professional or by the do-it-yourselfer.

The Unit: The unit is the machine that disperses the insecticide to the nozzle circuit. The units sold by PestPoolandLawn.com are either a [MistAway](#) or [Pynamite System](#). Both brands have been proven to be the best in the industry.

The Nozzle Circuit: The nozzle circuit consists of 1/4" Nylon tubing and is designed to enclose the area that needs protected. An ideal scenario would have the nozzle circuit complete a complete loop around a backyard or patio with nozzles spliced every 10 - 15 feet apart.

The Insecticide: The Pyrethrum insecticide in most cases is a water based emulsified concentrate that is either poured into a 55 gallon container or snapped in to a delivery system such as a Gen 3+.

The Unit, Nozzle Circuit and Insecticide are the 3 things necessary to design and install .

Take a moment and watch the MistAway Systems video that shows you what the systems looks like and hear what customers that have had the system installed say.
