

Pro-Package E TDD-PPU-PPE

Pro-Package E consists of 8 separate structures: 4 towers and 4 partial rings. To install a structure, assemble its tubes then zipper on its fabric print. After all prints have been installed, connect the structures together.

Separately assemble the frames for the towers and the partial rings. Connect the poles and match the symbols together. Click together so the button nubs protrude through the holes.

Keeping the towers and rings separate, slide on each of their graphic prints like a pillow-case. Attach the monitor mounts as shown using the 4 screws provided. After that, zipper at the tower bottoms and ring sides.

On the towers, attach the pegs to the feet plates using the provided bolts. Use the hand tool included to tighten them. Attach the feet to the tower frames.

Find the small hidden zippers in the seams shown by the arrows. Carefully open these so that you can get your hands into the towers. Bolt the partial rings to the tower, from the tower interior into the ring frame. Repeat for 4 towers and 4 rings left and right.

Bolt 2 brackets vertically onto the back of your VESA compliant monitor. Hook your monitor onto the frame. Max 20 lbs (9 kg) 36". Completed installation shown. Tables and chairs for illustrative purposes only.
