Features

GENERAL FEATURES

Both Double Acting and Spring Return VIP valves (either Normally Open or Normally Closed) are available in sizes ranging from 3/8" to 2".

Unidirectional flow.

GAS threaded ends as per UNI/ISO 7/1 Rp - DIN 2999 (NPT threads on request) with control fluid connections as per NAMUR interface.

Improved fluid dynamics allow minimum pressure losses. See Flow Pressure Diagram.

VIP valves can be used in any mounting position (horizontal, vertical or oblique). They can be provided with seals in NBR, FKM or EPDM:

- NBR: suitable for air, gas, oils, water etc..
- FKM: perfectly suitable for most fluid. Unsuitable for steam.
- EPDM: perfectly suitable for hot water and steam. Unsuitable for mineral products (oils, grease, etc..).

For further information about gas, explosive fluids, material compatibilities etc. please contact our technical department.

Valve opening and closing can be signalled by means of external magnetic limit switches (to be requested on ordering the valves, as they cannot be assembled afterwards).

According to 97/23 EC "PED" - ATEX version in conformity with directive 94/9/EC (to request at time of order)

CONTROL MEDIA

Filtered compressed air, not necessarily lubricated. At temperatures from -20°C to 0°C, use dry air. In case of lubricated air, seal compatible oil must be used.

Air supply:

- 3 bar min.- 8 bar max. in Double Acting execution.
- 4,2 bar min.- 8 bar max. in Spring Return execution.

OPERATING MEDIA

Pressure: 10 bar max, see diagram

Temperature:

- from -20°C to +80°C (NBR);
- from -20°C to +150°C (FKM);

 Be environmentally friendly...please don't print this document unless you really need to.

- from -20°C to +150°C (EPDM).

Vacuum tightness: 740 mm Hg

Features & benefits

FEATURES & BENEFITS		
1	Internal diameter equal to the diameter of the pipe	High flow capacity
2	Pneumatic actuator integrated in the valve	Space saving (-60%) and reduced costs compared to an automated valve
3	Piston with chemical nickel plating	High corrosion resistance
		Lower wear of the seals due to the increase of the surface hardness (400 -550 HV)
4	Lip seals	Less wear of the seal comparing with an o-ring
		Several seal materials available
	No external moving parts	Maximum safety
	Long life time granted	Easy mounting
	100% in- house manufacturing process technology	Lifetime 10 times longer than a ball valve with with reduced maintenance costs
	Less Air consumption	Maximum control and accuracy in all the stages of the manufacturing process
		80% less air consumption compared to an actuated valve with SR pneumatic actuator therefore less load on the compressor or the possibility of using a smaller compressor's size.

	ATEX Certificate	Installation is allowed in a potential explosive environment
	PED Certificate	Full compliance with European Safety Standards for Pressure Equipment

Working principle

WORKING PRINCIPLE

A VIP valve (patented by OMAL exclusively) is a proper automatic valve embodying both interception device (between pipe C-D) and control device (A-B).

It works thanks to the internal movement of a piston supplied with air. At the end of its stroke (a VIP valve is an ON/OFF valve), the piston presses on the seat seal or moves away from it letting the intercepted fluid flow or stopping it from flowing. As the seat is perfectly tight and the intercepted fluid pressures discharge on it, the pressure necessary to move the piston is completely independent of the fluid pressure. As a result OMAL has been able to design a light space saving and lasting valve. Its full bore and its improved internal dynamics allow minimum pressure losses, too.

CLOSED VALVE

Supplying the hole "A" with air (the hole "B" must be discharging) at the end of its stroke the piston presses on the seat seal: the valve is closed.

As in Spring Return N.C. executions the spring is in "A", if there is no control, the piston will touch the seat seal: therefore, the preferable position is the closed one.

TRANSITIONARY PHASE

During the transitional phase (the picture shows the opening transition in a Double Acting execution), one of the two holes is supplied. The piston moves axially changing the previous closed or open state. In Spring Return N.C. executions, the closing is caused by the spring (if there is no control).

In Spring Return N.O. executions, the opening is caused by the spring (if there is no control).

Both opening and closing transitional phases last less than a second.

OPENED VALVE

Supplying the hole "B" with air (the hole "A" must be discharging) at the end of its stroke the piston is at maximum distance from the seat seal: the valve is open.

As in Spring Return N.O. executions the spring is in "B", if there is no control, the piston will be away from the seat seal: therefore, the preferable position is the open one.

Accessories - NAMUR solenoid valve

Solenoid valve 5/2 as per NAMUR

This solenoid valve is designed for the selection of the functions 5/2 and 3/2, which is realized by using wing the appropriate plate.

Full-working input power - D.C.: 2,5 W

Full-working input power - A.C.: 2 W

Supply voltage tolerances: +/- 10%

Coil insulation: F-class

Protection with connector: IP65

Electric connection: PG 9

Pneumatic connections: inlet 1/4"; outlet 1/8" ISO 228

Max. pressure: 10 bar

Operating media temperature: from -10°C to +80°C

Ambient temperature: from -10°C to +50°C

Namur solenoid valve

Solenoid valve	ER8188A2	ER8188A4	ER8188A5	ER8188C2	ER8188C4
Voltage	24V AC	115V AC	230V AC	24V DC	110V DC

Accessories - Micro solenoid

Micro solenoid valve

This solenoid valve is connected by a joint which fits directly to the actuator air intake, without other fittings or fixing screws.

3/2 solenoid valve, with solenoid available in the following voltages: 24-110-220V AC; 12-24V DC.

Starting input power - A.C.: 9 VA

Full-working input power - D.C.: 5 W

Full-working input power - A.C.: 6 VA

Supply voltage tolerances: +/- 10%

Copper wire insulation: H-class

Coil insulation: F-class

Protection with connector: IP65

Electric connection: PG 9 any orientation acceptable 360°

Pneumatic connections: 1/8" ISO 228 any orientation acceptable 360°

Max. pressure: 10 bar

Operating media temperature: from -10°C to +50°C

Ambient temperature: from -10°C to +50°C

∅ Bore 1,3 mm

Micro solenoid valve

Voltage	24V AC	115V AC	230V AC	12V DC	24V DC

Accessories - Magnetic limit switches

A VIP valve can be provided with magnetic limit switches and signalling LED.

Limit switches are supplied with a KIT which makes it possible to fix them on the outside easily and quickly.

Since the magnets are situated inside the valve, they must be assembled while mounting the VIP and not afterwards.

That's the reason why the limit switches must be requested on ordering the valve.

LIMIT-SWITCH ELECTRICAL FEATURES	
Switch indicator	LED
Protection level	IP 67
Nominal voltage with direct current	3 - 250 V dc
Nominal voltage with alternating current	3 - 250 V ac
Maximum voltage drop	2,5 V
Maximum power with direct current	50 W
Maximum power with alternating current	50 VA
Maximum current at 25 °C (resistive load)	1 A
Protection against inductive tension peaks	250 VR
Inverse polarity protection	
Maximum applicable load (coil with overvoltage suppressor)	10 W
Maximum applicable load (simple coil)	10 W
Maximum applicable load (PLC)	
Electric life (resistive load 20% max. power short distance between load and switch)	10x10 ⁶
Repeatability	0,1 mm
Operating time (resistive load)	2 ms
Release time (resistive load)	0,1 ms
Working temperature	-30 / +80 °C

Impact resistance (11ms)	50 g
Vibration resistance	1000 Hz
Sensor type	1
Connecting cable 2m	n° 2 fili
