

Dirt Warrior Accessories - Front Windshield

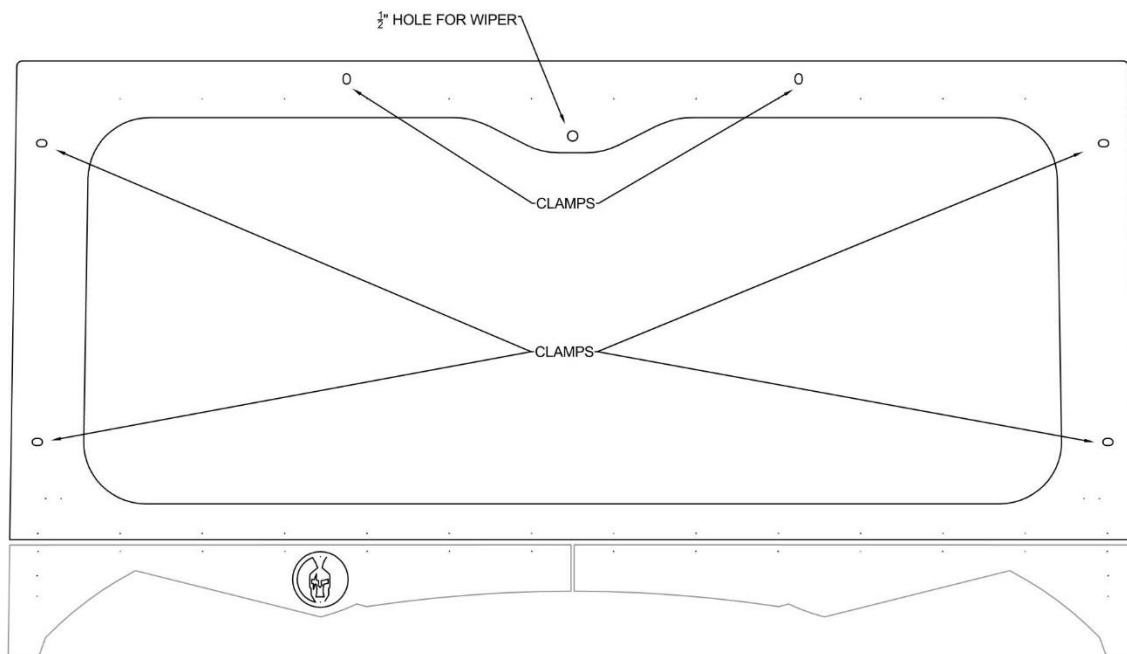

Helpful Hints for Installation

- Put cage clamps on roll bar approximately where they will line up with holes on the windshield. Windshields will have either 2, 4, or 6 clamps depending on model. (See example in diagram below).
- Hold window up and lay in place on cage. This usually works best with 2 people.
- With screws, washers, and nuts (supplied) finger tighten all screws to cage clamps and roll cage. NOTE: The clamps always go on inside of car.
- Next, position window so that it is high enough for the vents to open but close enough to the hood that you get a tight fit. Then, position side to side to center window.
- Once you have the window positioned, begin tightening all screws.
- Now that the window is on, verify that the vent flaps operate correctly.

Thank YOU for your BUSINESS & Have A DiRTy DAY!!!

EXAMPLE:

This is just an example of one of our windshields and clamp placement. Each windshield model has different characteristics and clamp placement. In general, this is just a guide.
