Controller

Model: CE-STCON

Our digital solar thermal controller compares the temperature in the storage tank (or buffer) against the temperature on the solar collector. It then switches the pump on automatically if there is a demand for heat and a higher temperature at the collector.

- The controller kit includes:
- Digital Controller Interface
 - Wiring Centre & Temperature Probes.

Pump Station

Model: CE-STPUMP

Our solar pump station is used to pump the heat transfer medim around the system.

The pump station kit includes: temperature / pressure gauge, flow meter with balacing / filling valve, safety valve & pump.
