

Introducing **Purple Sticky Brand™**'s newest liquid and smokeable™ herbal extracts! Be the first on your block to carry these original new products. Blow away the competition and your profits!

Available in:

10 AtomiX™ 1 gram smokeable™

1 oz & 2 oz liquid tincture

MEXICAN TARRAGON (*Tagetes lucida*)

Tagetes lucida is an herb that has been compared to Salvia Divinorum, one of the world's most potent naturally occurring psychedelics.

It is most notably used in ancient Aztec rituals and for its claimed psychotropic and entheogenic effects. It has been said to induce lucid dreaming, dreamlike visions and a calming, relaxed effect.

DREAM HERB (*Calea zacatechichi*)

Take control of your dreams and your nocturnal experience with Dream Herb Calea, the most famous lucid dreaming herb. Mexican Indians have designated it as a visionary entheogen. When smoked or taken in tea, it has been said to enhance dream recall, visions, and clarity.

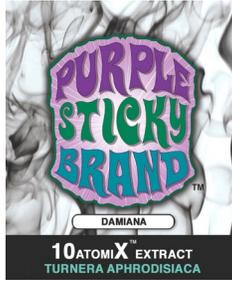

SINICUICHI (*Heimia salicifolia*)

Sinicuichi has been compared to cannabis and is a favorite of those who live in places who have not yet legalized marijuana. It is famous for being an Aztec ritual plant and is used today by Mexican shamans as a tool for divination.

There are many reports of auditory hallucinations.

The natives of Mexico believed it has sacred or supernatural qualities, believing it helps them recall pre-natal events or past lives.

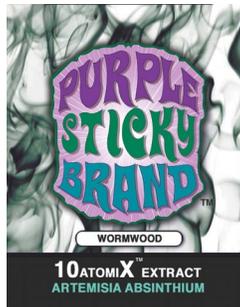

DAMIANA (*Turnera aphrodisiaca*)

Damiana is said to be the best alternative to Sativa marijuana strains due to its relaxing and simultaneously stimulating effects.

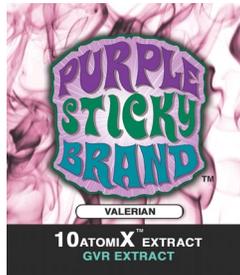

Damiana has been known as an ancient aphrodisiac for both men and women since the times of the Aztecs. Damiana first was recorded with aphrodisiac effects in scientific literature over 100 years ago and has since become known all over the world to help support peak performance.

Damiana has a synergistic effect with **Passionflower** which when used in combination is said to be extremely relaxing and may promote lucid dreaming.

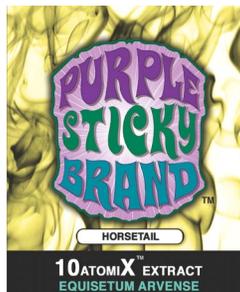

WORMWOOD (*Artemisia absinthium*)

Yes! The one used to make Absinthe! Wormwood is the primary component of absinthe. It is said to have psychoactive properties that many compare to the effects of THC. Picasso, Hemingway, and Van Gogh attributed part of their creativity to absinthe-induced visions. Referenced in the Bible and ancient Egyptian texts, Wormwood has a long history as a peaceful, relaxing psychoactive.

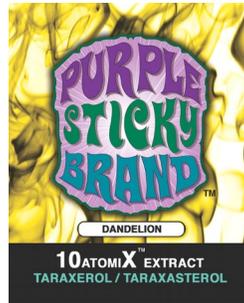

VALERIAN (*Valeriana officinalis*)

Valerian is one of the most researched herbal remedies for insomnia and anxiety. Scientists have found that **Valerian increases GABA in the brain, which is the same way that pharmaceutical anti-anxiety drugs like Xanax and Valium work.** Users report a sedating effect making it easier to fall asleep.

HORSETAIL (*Equisetum arvense*)

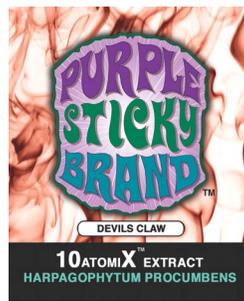

Horsetail has been used in herbal medicine since the times of the ancient Romans and Greeks due to its antioxidant properties. It is now popularly used as a diuretic ('water pill') by professional bodybuilders and models. Users describe it as having the effects of a diuretic without altering the body's electrolyte balance.

DANDELION (*Taraxacum officinale*)

Modern naturopathic physicians use dandelion to combat the effects of pharmaceutical drugs on the liver and to reduce the side effects of the drugs. **Dandelion is a secret weapon for those who enjoy trying different herbs and want to keep their body detoxified and able to fully feel their experiences. Anecdotal reports say that dandelion can help curb the intensity when an experience turns out to be too much for you.**

Rich in vitamin A and antioxidants, Dandelion has been used in traditional Chinese medicine for thousands of years as the primary herbal remedy for liver function, inflammation, and detoxifying the body.

DEVILS CLAW (*Harpagophytum procumbens*)

Devil's claw is one of the most researched herbal remedies for arthritis and pain. An ancient Celtic ritual plant, devil's claw is an anti-inflammatory herb which naturopathic doctors have called the best pain relief for arthritis, joints, and back pain. Clinical studies suggest that it is as effective as conventional anti-inflammatory drugs.

PASSIONFLOWER (*Passiflora incarnata*)

Passionflower has a long tradition of use in herbal medicine. **Many users report calming effects without the sedation** typical with other aids. Naturopathic doctors have used it for relieving anxiety, insomnia, muscle spasms, and even drug withdrawal symptoms.

It is especially popular in Europe as a sleep and anxiety aid, often combined with Valerian. Studies suggest that passionflower is comparable to pharmaceutical anxiety medications in naturally treating anxiety symptoms.
