## DOUBLE-SIDED TAPE METHOD

### SINGLE

### DOUBLE

### TRIPLE

1. Shower dispensers can be securely mounted to most surfaces using our double-sided tape method. This is the preferred installation for glass & mirror surfaces.
2. When ordering your dispenser units, you should have indicated that you wanted double-sided tape affixes to dispenser backs. If you didn't please contact Zogics and we will provide pre-cut mounting tape sections.
3. Remove bottles from the dispenser and make sure your mounting surface is clean & dry before starting installation.
4. Determine the exact height that you would like the dispenser to hang. If installing more than one unit, check to see that you can install all dispensers at a uniform height. Be sure to double check that there are no shower heads or fixtures in the way of your installation locations.
5. Mark your selected positions for your dispensers. Then remove the blue backers from each dispenser and press firmly in place for 30 seconds. To get the best adhesion on certain surfaces, after removing the blue backers, apply heavy duty construction adhesive directly on the back of the dispenser, then press firmly on wall for 30 seconds.
6. We also recommend placing a small bead of clear or white caulk around the outside edges of each dispenser unit. This will prevent water and residue from getting behind dispensers.
7. Wait 15 minutes for the mounting tape to set and your caulk to dry. While you wait, you can start filling your bottles with bulk liquid product provided by Zogics. After the 15 minute wait, insert your bottles into your dispenser.

# Dispenser Installation Guide

## CLEANING & MAINTENANCE SUGGESTIONS

- All dispenser bottles are flame-treated and silk-screened with special ink to maintain their original color for years in wet shower conditions.
- Dispensers should only be cleaned with soap and water. If you use a steam cleaner or other chemicals to clean your shower area, we recommend covering your dispenser bottles to keep them from being exposed to harsh chemicals.
- We suggest that you completely wash out your dispenser bottles at least once every two months. The bottles easily pop out of the brackets so that they can be cleaned. Soap and shampoo bottles do not need to be cleaned as often as lotion and conditioner bottles.
- Many customers choose to purchase a matching set of spare bottles and do a complete switch out once every two months. They thoroughly wash the old bottles and are ready for their next switch in two months.
- The pump tops are very durable and should last six months to a year. To keep your pump tops working properly, they should be cleaned two or three times per month by simply pumping warm water through them.
- Dispenser brackets should also be cleaned regularly to prevent residue build-up and the best time to do this is when you're exchanging bottles.
- Overall, a regular maintenance program will increase the life of your dispensers and give your members & guests a more pleasant experience in your locker room.
