## AAMI Level 4 Protective Gown

Exposure to the pathogenic microorganisms harbored in blood, body fluids and other potentially infectious material can lead to occupationally acquired infections in healthcare workers. That’s why it’s critical that healthcare providers wear personal protective equipment (PPE) and understand the levels of barrier protection these PPE items can afford them in patient-care and surgical situations.

At the heart of this AAMI standard are the four levels of barrier protection, ranging from level one, which is the lowest level of protection, to level four, which is the highest level. To attain level four classification, material must be considered to be impervious, and is subjected to the blood barrier test (ASTM F1670) and the viral barrier test (ASTM F1671).

Vizocom’s Disposable Isolation Gown conforms to AAMI Level 4. Our Disposable Isolation Gown provides barrier protection, and the gown is made of Anti-Static Non-Woven PP Fabric with open-back for breathability and comfort. Coverage on the front and sides provides protection from high fluid levels and blood borne pathogens.

<b>Isolation Gown - Level 4</b>	
<b>Level</b>	<b>AAMI Level 4</b>
<b>Anticipated Risk of Exposure to Fluid</b>	<b>High</b>
<b>Gown Characteristics</b>	<b>Anti-Static Non-Woven PP Fabric + PE Breathable</b>
<b>Recommended Areas of Use</b>	<b>Med/Surg Unit</b>
