

DG-8 Isolation Gown Level 3

It's critical that workers wear personal protective equipment (PPE) and understand the levels of barrier protection these items can afford them during work.

At the heart of this AAMI standard are the four levels of barrier protection, ranging from level one, which is the lowest level of protection, to level four, which is the highest level. To attain level four, the material must be considered impervious. Vizocom's

Disposable Isolation Gown conforms to AAMI Level 3. Our Disposable Isolation Gown provides barrier protection with breathability and comfort.
