

DS-3 Free Standing Automatic Dispenser

Hand sanitizers provide a convenient method of cleaning hands without requiring a sink and running water. Fast-dissolving sanitizer solutions clean users' hands and then dissipate, alleviating the need for rinse water or paper products for drying hands. This allows for a hand sanitizing station to be installed in places without having to install plumbing or other accessories.

Free Standing Automatic Dispensers offer a good way of cleaning hands. An automatic hand sanitizer dispenser comes with a sensor, and as soon as you place your hand under it, it dispenses the sanitizer instantly. There is no need to touch the dispenser itself, making it a very safe hand cleaning solution.
