

MG-2 Nitrile Examination Gloves

Nitrile examination is quickly becoming the material of choice for clinics and hospitals. The main reason is unlike latex, nitrile has a lower allergy rate than latex gloves.

Nitrile gloves provide exceptional puncture and chemical resistance. They are highly punctured resistant, up to 3 to 5 times more resistant than latex. Nitrile gloves are used in various applications, including industrial and food industries, health care and hospitals.

Dimensions		Standards	
		Supérieur	ASTM D6319 / EN 455
