

MG-D23V Diamond Violet Blue Nitrile Industrial Glove

The Diamond violet blue nitrile industrial glove provides an exceptional balance of performance, comfort and durability. The gloves are ambidextrous, textured, beaded, and are resistant to a wide range of chemicals.

They eliminate the potential for allergies because they don't contain the proteins found in natural rubber which are present in latex gloves.

The Diamond violet blue nitrile industrial gloves provide up to three times the puncture resistance of latex gloves of comparable thickness, this ensures the wearer's safety from chemicals and pathogens.

The Diamond violet blue nitrile industrial gloves are used in various applications, including industrial, food industries, healthcare, and hospitals.
