

MG-D2 Diamond 4 Mil Nitrile Examination Gloves

The 4 mil Diamond Advance nitrile examination gloves are quickly becoming the material of choice for clinics and hospitals. The main reason for this is that unlike latex, nitrile has a much lower allergy rate than latex gloves because they do not contain proteins found in natural rubber.

This nitrile glove provides exceptional puncture and chemical resistance. They are highly puncture resistant with up to 3 to 5 times more puncture resistant than latex.

The 4 mil Diamond Advance nitrile examination gloves are used in various applications in a wide range of industries including industrial, hospitality, food, cosmetics, and healthcare.
