

## MG-I26BF INTCO Synguard Black Nitrile Exam Gloves Fentanyl Resistant, Chemo Tested

The INTCO Synguard medical grade nitrile exam gloves are quickly becoming the glove of choice for clinics and hospitals. These gloves are fentanyl resistant and chemo tested. With 100mcg/2mL Fentanyl Citrate Injection tests, there is no breakthrough for up to 240 minutes.

These nitrile gloves provide exceptional puncture and chemical resistance. They are three to five times more resistant than latex, and cause no allergies the way latex does.

These fentanyl-resistant and chemo tested nitrile examination gloves are extra durable yet comfortable to your skin. Stronger and thicker than regular nitrile gloves, they offer improved tactile sensitivity and work great for both commercial and industrial use.
