

WARNING: Risk of fire or electrical shock.

This fixture must be installed in accordance with the National Electric Code and local code specifications. Failure to follow these codes and installation instructions will void the warranty and may result in serious injury and/or damage to the fixture. Do not exceed the total wattage load as specified by the transformer rating. This product is designed for above ground installation only. Keep these instructions for future use.

- DO NOT** use with extension cords.
- DO NOT** submerge in water.
- DO NOT** connect multiple transformers in parallel or in series.
- DO NOT** use with submersible fixtures.
- DO NOT** exceed the rated wattage of the unit.
- DO NOT** plug in to a circuit with a dimmer.

The product's sole use is for low voltage lighting systems.

These lights work exclusively with our WiFi Enabled Line of Transformers. Always disconnect the transformer from the electrical outlet before working on or installing this unit and/or any part of the lighting system.

This product may be mounted in an indoor or outdoor location.

This product must be connected to a covered 120V AC GFCI (Ground Fault Circuit Interrupter) outlet that is rated and marked for "wet location."

WIRING INSTRUCTIONS

We recommend using 12 AWG low voltage direct landscape wire. It is important to distribute fixtures evenly along the cable with higher wattage fixtures closer to the transformer if possible. Only use the bottom terminals for wiring to lighting. Do not loosen the top terminals. They are for internal wiring of the transformer.

The higher voltage terminals are for long wire runs to lights. These will help account for voltage loss along the long run of wire.

CIRCUIT BREAKER

This product has a built in circuit breaker to help protect against electrical short circuits. This does not prevent the need to use GFCI outlets marked for "wet location." It also does not prevent the requirement to follow all local and electrical building codes for the main circuit breaker protection.

If a circuit break occurs, immediately disconnect the transformer from the power source. Make all repairs to the lighting system which cause the circuit breaker to trip. Once the problem has been determined and fixed, reset the breaker by switching to the on position.
