

Super Sugar Delayed Maturity

SORGHUM SUDANGRASS

- **Super Sugar Delayed Maturity** increases yield producing 2-3 tons/acre above an early hybrid with 25-30 additional growing days.
- First and second cuttings maintain nutritional protein and digestibility longer while gaining tons.
- Use 5-10 lbs/acre less seed for added standability and cut at 60-80".

AGRONOMIC TRAITS	
Ideal Harvest Height	60-80"
Relative Maturity	Late
Days to Maturity	60-80 Days
Plant Type	Juicy Stalk
Midrib Type	Conventional
Standability	Better
Double Cropping	Yes
Dryland/Irrigated	Both

MATURITY AND YIELD				
8-10 Tons				
1st Cutting	60-80 days 60-80"			
2nd Cutting	40-60 days 40-60"			
3rd Cutting	30-40 days 30-40"			
MANAGEMENT TIPS				
Seeding Method	Dryland Lbs./Acre	Irrigated Lbs./Acre	Dryland Seed/Acre	Irrigated Seed/Acre
Drilled	35-40	40-45	665,000-760,000	760,000-855,000
SEED PER POUND: 19,000				
SEEDING DEPTH: 1"-1.5"				
SOIL TEMPERATURE: 62°F				
RECOMMENDATIONS: 1-1.25 LB. N PER GROWING DAY/ACRE SEE MANAGEMENT TIPS FOR PRUSSIC ACID AND NITRATE PAGE FERTILIZER
