

- Crescent Wrench

- Channel Lock Wrench

- Pipe Cutter or Hack Saw

- Screw Driver

- Box Wrench

- Plumber's sealant tape

- Clear silicone caulking

Step1

Make sure the product is in perfect conditions, especially the rim that will help us make the hole at which to embed.

Step2

Check the product and trace the outside edge onto craft paper or cardboard. Add a second line that is 3" inside that line.

Step3

Position the template flat on the surface to align with the installation. Follow the suggested steps to prepare the placement of the product.

Step4

Mount the product, and in case it is not fit properly fill the edges until it is secure correctly. To eliminate the gaps gently tap the rim with a rubber sledge mallet.

Step5

Apply silicone to the bottom of the product. Position product where it will be installed. Add the materials needed to seal the space of plament.

Step6

Clean off excesses of installation materials. Wait 6-12 hours before testing out your product.

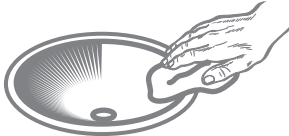

Step7

Check for any leaks or gaps you start a regular use. When no leaks or gaps are found, start using and enjoy your beautiful product.

The maintenance of your copper product is really easy.

1. Right after you use your product, wipe it dry with a clean cloth.

2. To clean the products you only need mild soap, water and a sponge. You must use them only when necessary.

3. Do not use abrasives or harsh chemicals in any of our products.

4. To keep your product with the best appearance, occasionally apply a thin layer of wax*. The wax will help to maintain the luster of copper and to promote a better water runoff.

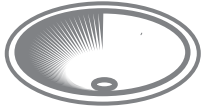

* Renaissance Wax

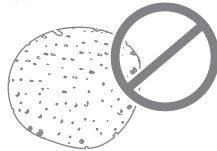

5. The patina of your product will change continuously. The evolution of a copper finish is gradual and over time it becomes even more beautiful. You can reduce this change by applying a protective wax*.

* Renaissance Wax

6. If your product has a scratch, don't try to fix it using fibers.

7. To prevent discoloration or damage to the finish, avoid exposing your product to acidic substances, such as, lemon, grapefruit, vinegar, hot sauce, etc.

8. Be sure to rinse the sink immediately if one of these comes into contact with copper.
