FOR IMMEDIATE RELEASE

Reliefband® Device Expands Uses for Post-operative and Chemotherapy Patients

Las Vegas, NV (January 9, 2018) – Reliefband® is a clinically-proven, wearable, medical device which provides an effective, therapeutic, drug-free solution for nausea, retching and vomiting. Reliefband Technologies, LLC, announces that the Reliefband® 1.5 and the brand new Reliefband® 2.0 device have FDA-cleared claims including usage for chemotherapy and post-operative induced nausea, retching and vomiting (CINV) and (PONV). Both devices are available over-the-counter and online at Reliefband.com.

Reliefband controls nausea, retching and vomiting caused by motion sickness and can also help prevent and mitigate the nausea, retching and vomiting symptoms post-operatively. According to the Annals of Palliative Medicine (APM), "Postoperative nausea and vomiting (PONV) remains a significant clinical issue that can detract from patients' quality of life in the hospital/treatment facility, as well as in the days immediately post-discharge." Patients can now use Reliefband as an adjunct therapy to anti-emetics to help alleviate post-operative nausea, retching and vomiting, whether they are still in the hospital or at home.

Reliefband can also control nausea, retching and vomiting for patients undergoing chemotherapy treatment. According to Cancer.org, "Chemotherapy drugs act on the body in different ways and each person responds to chemotherapy and to anti-nausea/vomiting drugs differently." How likely you are to suffer from nausea while undergoing chemotherapy depends on a few personal risk factors including age, having a history of motion sickness, having a history of morning sickness during pregnancy, having anxiety, or being prone to vomiting when you are ill. Reliefband controls the nausea within minutes helping chemotherapy patients live their daily lives without nausea while undergoing treatment.

Clinically proven and used in hospitals for years, the wearable Reliefband technology uses the body's own neural pathways to naturally control nausea. Delivering gentle pulses to the median nerve at the P6 pressure point located on the underside of the wrist, the pulses generate signals which travel to the nausea control center of the brain to resolve the conflict between what we see and what we feel. This groundbreaking therapy works as well as a leading prescription medication, but without side effects such as drowsiness or constipation.

Comfortable, adjustable and easy to use, Reliefband has different settings so you can adjust the therapy to your specific need. For more information please visit <http://www.reliefband.com>.
