

squishy circuits[®]

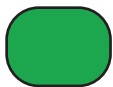

build instructions for:

Turtle

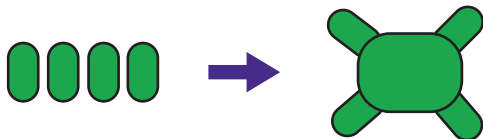

colors needed:

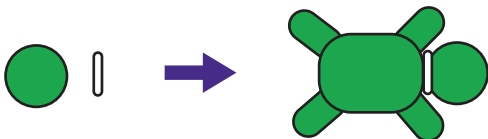

- 1 Create the body of the turtle by forming a circle shape using the green dough.

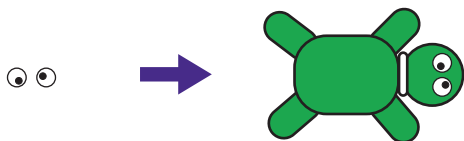

- 2 Next, create four legs using the green dough and attach each to the body.

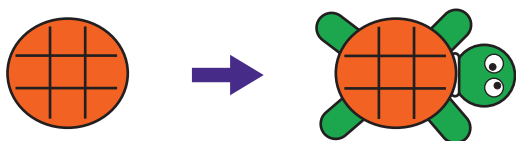

- 3 Create the head by rolling a ball of green dough. Flatten a piece of white dough and attach both to the body.

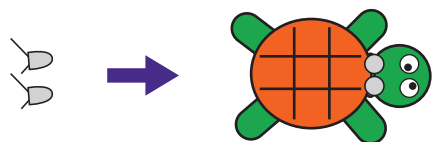

- 4 Attach two googly eyes to the head (optional).

- 5 Create the turtle's shell by flattening a piece of orange dough into a circle shape. Add the shell pattern using the dough knife.

- 6 Insert the long LED legs into the turtle's shell and the short legs into the turtle's head.

- 7 Last, insert the red wire from the battery holder into the body of the turtle and the black wire into the head. Turn on the battery holder to light up your turtle!
