AC NEED

TFO NEEDLE 'N' TUBE

The Needle 'N' Tube design allows for the needle to stay in the tube as long as it hangs on the lanyard. If you carry it in a pocket make a half hitch as below or roll the lanyard on the tube and tuck butt end in space between the lanyard guides and fastening.

Tube Nail Knot

This is the knot to use if your tapered leader has knotted sections.

1. Hold the tube in left hand. Place the tag end of fly line on tube. Place butt end of leader on tube allowing 5-6 inches to make coils. Wrap 5-6 snug turns as shown.

2. Push butt end of leader into tube as far as possible.

3. Hold assembly firmly, slide it off tube. Pull ends tight to imbed wraps in finish of fly line.

4. Clip ends close, coat knot with fisherman's glue.

Fast Nail Knot

Use the needle as a support to tie this knot.

1. Lay the fly line tag end and the leader, as shown, holding the assembly with the left hand thumb and forefinger.

2. Using the right hand, grasp the leader butt extension and wrap 5 turns snugly back toward the hilt.

3. Holding the coils in place, pull up slack of tag end and butt end of leader.

4. Slip knot assembly off needle and tighten hard to imbed wraps into fly line finish. Clip ends close and coat knot with fisherman's glue.
