How do I make my extended reach air gun longer?

All of the Ultra, Classic+ Extended Reach, LJ, XT and 80LJ series are compatible with our mid-extension kits and can easily be extended. Mid-extension kits come in 48", 60", and 72" lengths and come complete with a coupler. To add a mid-extension, first break the thread locker bond at the extension/handle connection using a blow torch. Unscrew the extension. Screw one end of the mid-extension into the handle. Screw the other end of the mid-extension into the coupler. Finally, screw the extension into the coupler.

We use Guardair extended reach air guns in a particularly rough working environment and I need to ensure that the nozzle never comes apart from the extension. Is there any way to do this?

Yes. In addition to our standard thread locker and offer the option to pin the nozzle to the extension. We refer to this as a PERM1 connection. We also offer an optional PERM2 connection where the nozzle is pinned to the extension, and the extension is pinned to the handle. Contact our Customer Service Department at 800-482-7324.

Does Guardair sell replacement parts for the 79SG012 Syphon Spray Gun?

Guardair offers the replacement nozzle but not the replacement inner barrel for the 79SG012. The inner barrel is permanently attached to the body of the gun and is not repairable.
Ultra Safety Air Guns

The ultimate in comfort and performance.
Features

- Cast aluminum body with premium cushion grip
- Ergonomic trigger
- Adjustable hanging hook
- Aluminum extension
- Zinc Alloy Venturi nozzle
- 3/8” FNPT inlet

Ultra Venturi Series (Long Trigger)

Ideal for cleaning inaccessible and hard-to-reach areas. Efficient venturi nozzle boosts thrust up to 300% over conventional air guns, yet limits static pressure to less than 30 psi should the tip become blocked. Patented, adjustable hanging hook can be repositioned for convenient storage. Ergonomic, cushioned pistol-grip style handle provides unparalleled comfort.

ReverseForce™ Air Gun

Harnessing the power of compressed air, the ReverseForce Air Gun effectively extracts metal chips and debris from deep inside axle housings, hydraulic cylinders, machine cavities and gear boxes. Faster than conventional cleaning methods, the ReverseForce extracts rather than drives chips and debris further into interior of machinery. It’s light-weight and easy to handle.

Whisper Jet Thumbswitch Safety Air Gun

Compact thumbswitch style design fits comfortably in the palm of your hand. Whisper Jet nozzle reduces noise 7 to 11 dBA compared to conventional Venturi nozzles.

**Part No.**  **Model/Description**

| 980 | Whisper Jet Thumbswitch Safety Air Gun |

See website for full specifications

**Features**

- Durable, cast aluminum body
- Thumb operated, comfortable, steel trigger
- Aluminum Whisper Jet nozzle
- 1/4" FNPT inlet
Compact Thumbswitch® Series Safety Air Gun

Our most compact design fits comfortably in the palm of your hand. Venturi nozzle delivers safe, yet powerful thrust.

- 1/4" FNPT inlet
Lazer Safety Air Guns
Superior ergonomics and pinpoint accuracy in the palm of your hand.
Lazer® Palm Switch Safety Air Gun

Featuring a revolutionary, contoured grip paired with a unique comfort trigger, the patented LZR600 is the ultimate palm switch style safety air gun. Designed to maximize operator comfort and reduce hand fatigue. Integrated hanging hook for intuitive storage and retrieval. Powerful, accurate. Perfect for DIY, automotive, and industrial cleaning applications.

Big Air Guns
Big and powerful safety air guns designed specifically for heavy-duty industrial and construction applications.
Features
• Rugged, lightweight, pistol-grip style aluminum handle
• Heavy-duty aluminum extension
• Adjustable auxiliary handle
• Venturi and Quiet Force Nozzle options available
• ¾” FNPT inlet

**Force 5® Series Safety Air Gun**
The most powerful safety air gun on the planet, the Force 5 Series is designed for heavy-duty industrial and construction cleaning applications. Built for the toughest environments, they deliver maximum compressed air when and where required. Featuring a dead-man trigger, the Force 5 Series are the safe alternative to dangerous, “home-made,” ball valve actuated, open pipes. Engineered to be paired with tow-behind, or large in-plant compressors.

HydroForce® Power Wash Gun

Heavy-duty HydroForce power washer combines compressed air and standard municipal utility water to generate superior cleaning power. No external pressure unit or power package; requires no electricity, or gasoline. Single trigger operation provides convenient air/water operation. Turn off water with water shutoff valve (included) for air-only drying. Virtually maintenance free. Hot or cold water capable. Perfect for mobile applications where portability is at a premium.

Part No.   Model/Description
HYD024SSA HydroForce with 24” Stainless Steel Extension
HYD036SSA HydroForce with 36” Stainless Steel Extension
HYD048SSA HydroForce with 48” Stainless Steel Extension

**Flex-Angle Swivel Fittings**
Unique, patented swivel fitting provides 360° of rotation and up to 45° of angle. Eliminates hose kinking and reduces user stress from heavy or non-flexible air hose.

**Features**
- Rugged, nickel-plated steel construction
- 360° circular rotation and 45° angled rotation
- Dual rotation points prevents kinking of supply line
- Steel dust cover protects rotating joint

Valve Repair Kit for Big Guns
10 piece valve repair kit comes complete with all the parts required to rebuild and repair Force 5, Inforcer, and HydroForce guns.

500K01

HydroForce Shuttle Valve Maintenance Kit
Replace the HydroForce shuttle valve with this 6 piece, easy to use maintenance kit.
* for ¾” models

510K01

Mag Hook
Hang safety air guns or other air tools from any iron or steel surface with this versatile, magnetic hanging hook. No drilling required.

200A40

Gunslinger
Provides a convenient place to store extended reach safety air guns. Keeps tools ready for immediate use. No drilling required. Strong magnets grip iron or steel surfaces.

200A30

guardair.com
Slip-on Grip
Soft plastic slip-on grip provides thermal protection and extra comfort for air gun users. Slips on and stays on. Fits all Guardair Classic and Classic + style handles.

Chicago Swivel Coupler
Chicago “Air King” style swivel coupler provides a quick and safe method to connect air hose to air tools. Free-turning joint swivels 360º to prevent hose kinking. Claws insure positive connection.

Chicago Coupler
Chicago “Air King” style coupler provides a quick and safe method to connect air hose to air tools. Claws insure positive connection. Safety clips (not included) provide added measure of safety.

Extension with Venturi Nozzle for 75LJ
Aluminum extension with pre-attached Venturi nozzle. Threads with 75LJ handle.
See website for all extensions

Extension with Xtra Thrust Nozzle
Aluminum extension with pre-attached Xtra Thrust nozzle. Threads into 80LJ handle.
See website for all extensions

Extension with Whisper Jet Nozzle for 80LJ
Aluminum extension with pre-attached Whisper Jet nozzle. Threads into 80LJ handle.
See website for all extensions
Venturi Nozzle with Aluminum Extension
Replacement venturi nozzle/extension assembly specifically designed for Force 5 and Inforcer handles. Lightweight, aluminum venturi nozzle delivers high cleaning power on demand. 24" to 72" lengths available.

500A02

Safety Clips
Carbon steel safety clips provide added measure of safety when used with Chicago “Air King” style couplers.

500A02

48” Extension with Safety Tip Nozzle for HydroForce
Replacement nozzle for HydroForce threads onto extension. Side ports insure OSHA compliance.

048SSA

Chisel Point Nozzle & Steel Extension
Replacement chisel point nozzle/extension assembly specifically designed for Inforcer Steel handle. Hardened steel, chisel point nozzle breaks up and blows away stubborn materials such as concrete, asphalt, and hardpan soil. 24” to 72” lengths available. See website for all extensions.

Chisel Point Nozzle & Steel Extension
Replacement chisel point nozzle/extension assembly specifically designed for Inforcer Steel handle. Hardened steel, chisel point nozzle breaks up and blows away stubborn materials such as concrete, asphalt, and hardpan soil. 24” to 72” lengths available. See website for all extensions.

QuietForce Nozzle & Aluminum Extension
Replacement QuietForce nozzle/extension assembly specifically designed for Force 5 and Inforcer handles. Rugged, lightweight QuietForce nozzle delivers high power, low noise cleaning capability. 24” to 72” lengths available. See website for all extensions.

QuietForce Nozzle & Aluminum Extension
Replacement QuietForce nozzle/extension assembly specifically designed for Force 5 and Inforcer handles. Rugged, lightweight QuietForce nozzle delivers high power, low noise cleaning capability. 24” to 72” lengths available. See website for all extensions.

510N02

Safety Tip Nozzle for HydroForce
Replacement nozzle for HydroForce threads onto extension. Side ports insure OSHA compliance.

48” Extension with Safety Tip Nozzle for HydroForce
Replacement nozzle for HydroForce threads onto extension. Side ports insure OSHA compliance.

048SSA

Venturi Nozzle with Aluminum Extension
Replacement venturi nozzle/extension assembly specifically designed for Force 5 and Inforcer handles. Lightweight, aluminum venturi nozzle delivers high cleaning power on demand. 24” to 72” lengths available.

500A02

Safety Clips
Carbon steel safety clips provide added measure of safety when used with Chicago “Air King” style couplers.
500A03

Safety Lanyard
Never worry about losing a safety clip again. Attach one end to safety clip and wrap the lanyard around the base of the Chicago coupler.

500A04

Safety Cable
Provides positive attachment of air hose to air gun in case of inadvertent disconnect. Spring loaded loop makes for easy installation. Ideal for Force 5 and Inforcer Series safety air guns.

500A20

Sidekick Auxiliary Support Handle

510A01

HydroForce Shoulder Strap
Comfortable shoulder strap clips onto HydroForce handle to reduce fatigue. Transfers weight from hands to shoulders.

510A20

Pigtail Hose Assembly for HydroForce
5' air/water pigtail hose assembly maximizes the utility of the HydroForce. Minimizes hose kinking; eases handling.

Safety Excess Flow Check Valve
Automatically shuts off air flow upon a sudden air line break. Protects plant personnel and property from injury by “whipping” air hoses. Resets when repair is made. Allows full, unrestricted flow of air in normal open position.
Canister for 79SGM
Lightweight, rugged steel replacement canister for 79SGM Syphon Spray Gun.

Pressure Gauge with Rubber Tip
Pressure Gauge with rubber tip 0-60 Psi. Used to verify compliance of air guns.
FAQs

GENERAL

How can I purchase Guardair products?
Contact our Customer Service Department by phone at 800-482-7324, or via email at info@guardair.com.

How do I obtain current product pricing and availability?
Product pricing and availability can be obtained by contacting the Guardair Customer Service Department, 800-482-7324 or email info@guardair.com.

How can I obtain Guardair product literature?
Go to the Literature section of the Guardair website where product literature can be viewed or downloaded.

SAFETY

What OSHA standards govern the use of air guns?
For General Industry, two OSHA standards are of primary relevance to air gun users.

- The first standard focuses on permissible noise exposure covered under 29CFR Part 1910.95 (a) Occupational Noise Exposure.

Factory air lines normally operate at pressures between 80 and 120 psi and the majority of pneumatic tools, including air guns, require such pressures to operate effectively. However, OSHA requires that in the event an air line is dead-ended (for example, if the tip of an air gun is blocked), the static pressure at the point of blockage must be less than 30 psi.

This standard also states that when blowing off debris with an air gun, workers may be subject to “chip-fly-back.” This term refers to the tendency of loose particles or chips to fly back into the operator’s face, eyes, or skin. For operations that produce chip-fly-back, OSHA requires that effective chip guarding be incorporated into the workplace.
Are there any other OSHA standards that I should be aware of?
Yes. Shipyards, Marine Terminals and Construction are industries where additional standards apply regarding the use of compressed air and pneumatic tools.

- For Shipyards, the relevant standard is 29CFR Part 1915.131 General Precautions.
- For Marine Terminals, the relevant standard is 29CFR Part 1917.154 Compressed Air.
- For Construction, the relevant standard is 29CFR Part 1926.302(b) Pneumatic Power Tools

How can Guardair safety air guns help meet the OSHA standard for noise?
While occupational noise can be generated from a wide variety of sources, the use of a low noise safety air gun can be an important component in moving towards noise compliance. Guardair safety air guns featuring Whisper Jet and Quiet Force nozzles provide proprietary, noise limiting technology. Visit our website for technical data on Guardair nozzles.

How do Guardair safety air guns meet the OSHA standard for output pressure?
All Guardair safety air guns meet this standard by incorporating OSHA compliant, proprietary nozzles into their design. These include Venturi, Air Miser, Air Shield, Whisper Jet, and Quiet Force type nozzles. Visit our website for technical data on Guardair nozzles.

Is it necessary to turn my air compressor down to 30 psi to meet OSHA Standard 29CFR Part 1910.242 (b) relating to output pressure?
No. This is popular misconception and is not necessary for compliance. To meet this requirement, use an air gun that is properly engineered. All Guardair safety air guns meet this standard.

Is it permissible to tape an air gun trigger down (“always on mode”) to provide constant air flow?
While the OSHA regulations do not specifically prohibit this practice, Guardair does not recommend doing so. Disabling the “dead-man” feature inherent with the trigger mechanism could result in the air tool whipping around and causing serious injury.

What are the advantages of Guardair safety air guns versus straight pipes?
Safety air guns offer numerous advantages over straight pipes.

- First, straight pipes are inefficient as they use significantly more compressed air to produce the same amount of thrust versus a properly engineered safety air gun.
- Second, straight pipes are often regulated with a ball valve which does not include the “dead-man” feature inherent with the trigger mechanism of a safety air gun.
- Third, straight pipes are not tools designed with ergonomic features thus over time introduce operator fatigue. Finally, straight pipes are illegal and dangerous because they do not meet the OSHA standard limiting output pressure to less than 30 psi when dead-ended.
What is the difference between Pressure, Flow, and Thrust?

**Pressure** is the measure of potential energy stored within compressed air. Pressure is measured in pounds per square inch (psi). In general, most industrial compressed air systems operate at pressures between 80 and 120 psi. The electrical equivalent of pressure is voltage.

**Flow** is the volume of compressed air traveling through an air gun during a given period of time. Flow is measured in cubic feet per minute (cfm). In general, the higher the flow, an increased capacity (larger diameter) air line, and an increased capacity (larger horsepower) air compressor will be required. The electrical equivalent of flow is amperage.

**Thrust** is the effective force produced by an air gun and is generated from the combination of air pressure and air flow. Thrust is measured in pounds (lbs) and the higher the thrust, the more cleaning force is available. Ideally, thrust of say 10 pounds is capable of moving up to a 10 pound object. The electrical equivalent of thrust is wattage.

What is the recommended operating air pressure for Guardair safety air guns?

Most in-plant air compressors operate at pressures between 80 and 120 psi. This is the range we recommend for all Guardair safety air guns.

What is the maximum plant air pressure I can use and still be OSHA compliant?

Guardair does not recommend operating our air guns at pressures over 120 psi. Although the structural integrity of Guardair safety air guns have been tested and proven well above 120 psi, they have been designed to operate most efficiently and to meet the OSHA standard regarding output pressure at air pressures between 80 and 120 psi. Consequently, Guardair cannot certify that our air guns meet this OSHA standard at pressures in excess of 120 psi.

What size air line do I need to run my Guardair safety air gun?

In general, Guardair safety air guns featuring a 1/4” NPT inlets require 1/4” ID or larger air lines. Air guns with a 3/8” NPT inlets require 3/8” ID or larger air line. Air guns with a ¾” NPT inlet require ¾” ID or larger air line. To ensure rated thrust, air lines can always be sized larger than required, but not smaller.

What about connectors and fittings?

Be sure that fittings and/or connectors do not restrict the air flow in any manner. Use fittings that are rated the same size, or larger, for a given air line size. We recommended use of Guardair High Flow connectors.

What size (capacity) air compressor do I need to operate my Guardair safety air gun?

A good rule of thumb states that air compressors generate approximately 4.5 cubic feet per minute (cfm) of compressed air per horsepower (HP) on a continuous basis. To size a compressor (HP), divide the air requirement (cfm) by 4.5. Refer to the specification on your compressor for more information.
**Why does my air gun lack power?**
The three most common problems are:

- Undersized air lines
- Restrictions due to undersized fittings and/or connectors
- Inadequate plant air pressure or capacity

**If I block the side ports of a venturi nozzle with tape will I increase the thrust?**
Absolutely not! Blocking the side ports does not provide extra power at the nozzle tip. Thrust is actually reduced because ambient outside air cannot be drawn into the outgoing air stream. In addition, the nozzle is no longer OSHA non-compliant.

**What is the maximum ambient temperature in which I can operate my Guardair safety air gun?**
The maximum ambient temperature in which our air guns can be used is 200°F.

**I recently purchased a HydroForce, hooked up the air and water lines, but only air comes out of the nozzle. Why?**
The probable cause is inadequate air flow and/or air pressure.

- First, be sure to use an air line that provides adequate air flow to the HydroForce.
- Second, be sure that all air fittings and connectors are adequately sized and offer no restrictions.
- Third, ensure that the operating air pressure measures between 80 and 120 psi. Visit our website for video demo, including set-up and operation, of the HydroForce.

**What is the maximum ambient temperature in which I can use my HydroForce?**
200°F

**PRODUCTS/PARTS/ACCESSORIES**

**Does Guardair offer replacement parts and/or repair kits for safety air guns?**
We carry replacement parts for all of our guns. You can purchase replacement nozzles, extensions, and handles, as well as gun rebuild kits.

**How are extended reach air guns (ie Long Johns) assembled?**
First, thread locker is applied to the threads of each component (nozzle, extension, and handle). Components are then screwed together and tightened to factory specifications. The result is a semi-permanent connection with structural integrity.

**Can I unscrew the extension of my Long John and screw in different extensions?**
While this is possible, Guardair does not recommend this practice. Doing so first requires breaking the bond of the thread locker with heat from a blow torch or the like. Repeated screwing and unscrewing extensions runs the risk of galling the threads which are not designed with this in mind.
How do I make my extended reach air gun longer?
All of the Ultra, Classic+ Extended Reach, LJ, XT and BOLJ series are compatible with our mid-extension kits and can easily be extended. Mid-extension kits come in 48”, 60”, and 72” lengths and come complete with a coupler. To add a mid-extension, first break the thread locker bond at the extension/handle connection using a blow torch. Unscrew the extension. Screw one end of the mid-extension into the handle. Screw the other end of the mid-extension into the coupler. Finally, screw the extension into the coupler.

We use Guardair extended reach air guns in a particularly rough working environment and I need to ensure that the nozzle never comes apart from the extension. Is there any way to do this?
Yes. In addition to our standard thread locker, we offer the option to pin the nozzle to the extension. We refer to this as a PERM1 connection. We also offer an optional PERM2 connection where the nozzle is pinned to the extension, and the extension is pinned to the handle. Contact our Customer Service Department at 800-482-7324.

Does Guardair sell replacement parts for the 79SG012 Syphon Spray Gun?
Guardair offers the replacement nozzle but not the replacement inner barrel for the 79SG012. The inner barrel is permanently attached to the body of the gun and is not repairable.
