TransTel Lynx II
IP Enabled Telephone System

The TransTel Lynx II is the most powerful phone system in its class. Lynx delivers virtually all of the advanced features expected from a larger system; enabling even the smallest business to access advanced telecommunications tools thus giving a competitive advantage.

User friendly and affordable – Lynx II comes pre-programmed with simple "plug and play" functionality. Simply unpack the system and connect to your phone lines.

Lynx II is pre-configured for your convenience with 3 outside (CO) lines including caller id, 8 digital system phone ports, automated attendant for answering your calls with different greetings and voice mail boxes for taking messages. Be notified on your cell of messages left in your mailbox. You can even transfer your office phone to your cell phone when you are traveling!

Lynx II can be further customized and expanded to grow as your business does.

TransTel Lynx II System Software

The TransTel Lynx II system is equipped with a robust software feature set which is configured in a "plug and play" setup to get you up and running right out of the box! You may incorporate your own automated attendant greetings for various times of the day such as office hours, lunch and night modes of operation.
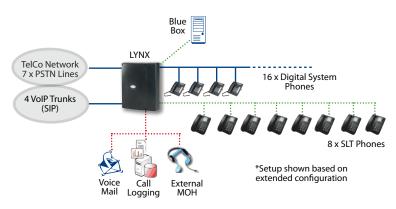

You may also setup mailbox greetings for the various telephone sets within your business or home office. Automatic fax detection and transfer is available so that you can use lines for both voice and fax capability, saving you money each and every month. You may also take advantage of advanced door phone boxes and access control boxes for access into gated entrances or restricted doorways.

For the smaller business or SOHO, Lynx II delivers more value and capability than any other system in its class.
