Zoom Room For Touch SOLUTIONS

avocor

ALZ series

Avocor and Logitech have joined forces to bring you the ALZ series - six simple-to-use, yet incredibly powerful Zoom Room for Touch solutions to bring interactive whiteboarding, video and content sharing at room scale to Zoom meetings in focus rooms, executive offices, huddle rooms and meeting spaces. The ALZ series integrates feature-rich, high-performing technology to optimize collaboration. By combining Avocor interactive displays, the popular Logitech MeetUp, the Zoom-ready Avocor Open Pluggable Solution (OPS) Intel i7 PC, custom mounting and custom cabling. The Avocor ALZ series are best-in-industry solutions for organizations deploying Zoom for communication and collaboration in every place that meetings happen.

The Avocor ALZ series includes two performance options: value-priced IR options as well as InGlass™ premium alternatives, both options are available in 65", 75" and 86" display sizes.

Seamless integration

The pre-configured Zoom Room i7 OPS PC minimizes cabling by integrating directly into the display for a sleek finished installation.

Simple Installation

Simple and easy to deploy at scale, the Avocor ALZ lets spaces be enabled for Zoom meetings quickly. Avocor's custom mount secures the Logitech MeetUp directly to the top of the display with just three screws and because of the proprietary power/data cable between the MeetUp and the OPS, the entire system runs off one wall outlet – no power strips required.

All-in-One Conference Camera

Logitech MeetUp features front-facing audio for the best clarity as well as a 4K camera with an extra-wide FOV (Field of View) and motorized pan/tilt lens to provide 160 degrees of total room coverage without the fisheye distortion that plagues typical wide-angle cameras. Wherever people sit or stand, RightSight™ auto-framing automatically moves the lens and zooms up to 5x to perfectly frame everyone in the room.

Intuitive writing experience and enhanced group collaboration

The Avocor ALZ's feature exceptional 4K resolution, superior inking and pixel-precise touch that most closely resembles writing on paper. Both the IR and InGlass Avocor ALZ options represent the most advanced display technology on the market, starting with slightly textured, firm glass that, unlike plastic screens, makes writing and annotating seamless and precise. The screen is also anti-glare, so it can be added to virtually any room or space without concern of lighting impact and it is resistant to fingerprints. With natural, seamless whiteboarding that provides precision down to the pixel, Avocor's displays are 4K at 60Hz, which means not only crystal-clear images but also low-to-no lag.
