

ASSEMBLY

STEP 1

Spread the enclosure netting (1) on the trampoline jumping mat, with the enclosure door centered under one of the arches of the enclosure system. Next detach the connecting arch pole from each pole into the net sleeve. Repeat this with all arch connecting poles, then reattach the connecting poles to the arches of the enclosure system. Make sure the curve of the connecting pole is facing outwards from the trampoline.

Assembly 1

STEP 2

Note: During step 2, you will thread the lower edge of the enclosure netting to the v-rings of the jumping mat using the tightening cords (2) provided.

Locate the v-ring closest to the right side of the door. Use one tightening cord (2) to tie a knot in one of the v-rings of the mat and the closest slot along the bottom of the net.

Next begin to thread the tightening cord throughout the v-rings of the jumping mat and open slots along the bottom of the enclosure netting, making sure to regularly tighten the cord as you go along the trampoline. It is important that the cord is pulled to maximum tightness in order to secure the net properly.

Continue this process until you have used all tightening cords and have made your way around the entire trampoline.

Note: The trampoline is likely to be other shapes, the picture is only for reference
