

Owners Manual

Step 1

Locate the zippered entrance to your trampoline net. Lay your unattached trampoline net around the perimeter of your trampoline frame so that the zippered entrance is positioned under the middle of any of your arched enclosure poles. (See page 2 for image of location).

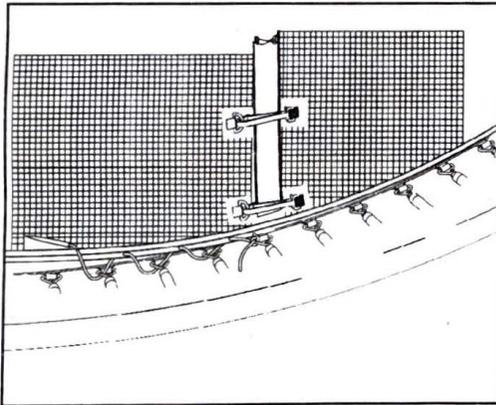

Step 2

Next, attach the bottom of the net to your existing trampoline. Beginning at the first hole to the left of the zippered entrance, thread the included cord through the net hole then through the closest ring of your trampoline mat/ jumping surface. Secure the end of the cord by tying a knot around both the net and mat ring.

Continue threading the cord through the next net hole and mat ring until all of the holes and rings have been threaded. Make sure to pull the cord tight when threading.

When you have threaded all of the net holes and mat rings, secure the end of the cord by tying another knot around the net and trampoline mat.

Step 3

Now you are ready to attach the top of the net to your caps with bag buckles. If necessary, adjust the net so that the bag buckles are centered to their corresponding caps. Raise the net vertically so the bag buckles can reach the caps, pull the strap of bag buckle over and round the caps, then interconnect. Please refer to Figures on the following page for illustrations. Once the first bag buckle is attached, finish attaching all of the bag buckles.

Then attach the bag buckles of middle of the net to the poles, pull the strap of bag buckle over and round the poles, then interconnect. Once the first bag buckle is attached, finish attaching all of the bag buckles. Once you have attached your net tightly at the bottom and you have secured the bag buckles have been attached, you are finished with assembly and you are ready to jump. Please remember to always exercise care while using your trampoline.
