## Patient Information

Name: Example Patient

**Date of Birth:** 01/29/1976 **Date of Vasectomy:** 02/11/2020

## Test Result

**Testing Performed:** Qualitative Semen Analysis

**Date of Test:** 04/08/2020 **KitID:** 99001111

Result: [x] No Sperm Seen

[ ] Positive (Sperm Seen) - Patient follow-up required

[ ] Other - See comments [ ] Error - See comments

Patient has been notified of this result: Yes [x] No [ ]

MaleFromHome performs qualitative semen analysis as a post-vasectomy test collected in a preservative. Samples are examined by certified laboratory personnel in our CLIA lab, using 60 high power fields (hpf) under a 40x objective for a total magnification of 400x. Comments are given in order to aid the provider in ruling out a failed vasectomy. Comments do not replace laboratory results and caution must be given when correlating subsequent specimens due to the variables present in the specimen volume collected and the specimen being diluted by the preservative. Patients may be referred elsewhere for qualitative semen analysis if needed.
