

# Aquamini

Multipure's Aquamini provides powerful filtration in a compact size. It utilizes Multipure's industry-leading solid carbon block filter to reduce the presence of contaminants that can negatively affect the taste, odor, and healthfulness of your water, and its small countertop footprint makes it the perfect portable filtration solution for travelers, vacationers, and students. The Aquamini features a stainless steel housing and is designed for easy installation and countertop use only.

## Benefits & Features

- Capacity: 250 gallons (6 months of regular use)
- Connects directly to the faucet with a dual-hose diverter valve
- Sits on top of the counter next to the sink
- Perfect for vacations, business trips, hotel rooms, college dorms, and more!
- Preorder replacement filters for \$45!

## Specifications

SKU	AQUAMINI1
Housing Composition	Stainless Steel
Rubber Items	Silicone
Inlet	1/8" NPT
Outlet	1/8" NPT
Replacement Filter	CBMINI
Approximate Capacity	250 Gallons
Approx. Flow Rate	0.5 gpm @ 60 psi
Water Pressure	100 psi max/30 psi min
Housing Dimensions	6"h x 5"w
Particulate Retention Size	Sub Micron (0.5 micron)
Housing Warranty	Lifetime

Filter life will vary in proportion to the amount of water used and the level of impurities in the water being processed. Claims of capacity are not applicable to contaminants reduced by mechanical filtration because of broad variations in the quality and quantity of physical matter in your drinking water. Your Multipure filter will clog, protecting you from these contaminants, and your flow rate diminishes. For contaminants reduced by adsorption, filter life/capacity is 250 gallons. It is recommended that the filter be replaced when the first of the following occurs: (a) 6 months have passed, (b) the unit's rated capacity is reached, (c) the flow rate diminishes, (d) the filter becomes saturated with bad tastes and odors. The CBMINI has not been tested and makes no claims for the reduction of contaminants of health concern.

# Carbon Block Technology

Multipure Drinking Water Systems utilize Multipure's innovative and proprietary solid carbon block filter. This solid carbon block filter employs multiple methods to reduce the presence of a wide variety of contaminants in water. Its pre-filter traps dirt, sand, and particles that affect the taste, odor, and clarity of water. Particles too small to be trapped mechanically are then electrokinetically adsorbed to the pre-filter surface. As water passes the pre-filter, the solid carbon block physically traps particles and chemically adsorbs the many different chemicals, pesticides, herbicides, and certain heavy metals that remain in the water. Because the solid carbon block filter is densely compacted, its surface area is maximized and water remains in contact with the filter material for an extended period of time. This extended contact period between the water and the filter ensures a consistently high degree of performance.

Nationally recognized standards established for the drinking water treatment industry confirm that the most effective systems for the removal of both aesthetic and harmful contaminants are those that utilize solid carbon block filters. Multipure is the original developer of solid carbon block technology, and has been the leader and innovator in the water treatment industry since 1970. Multipure, and its remarkable solid carbon block filter, is synonymous with superior quality, exceptional innovation, and intelligent performance. With a Multipure Drinking Water System, you are guaranteed the best.
