

MEASURING CHRISTMAS ORNAMENTS FOR COVERS:

Tips on measuring ornaments: You can measure ornament *diameter* by putting the ornament snugly between two bookends or upright flat objects and measuring the distance between the flat objects.

The *diameters* and *circumferences* of the ornaments needed for our ornament covers (measure with a measuring tape snugly around the middle) are approximately:

67mm or 2 5/8" diameter = circumference 210mm (8.25 inches)

80mm or 3.14" diameter = circumference 251mm (9.85 inches)

100mm or 3.94" diameter = circumference 314mm (12.37 inches)

Very slight variations should also work.

Please follow the included instructions and use the correct size ornaments as changing design size may destroy the integrity of the digitizing.
