Click to switch the picture quality.

② Speaker

Choose to hear live sound or not.

③ Screenshot

Shot a photo from the live screen. The captured pictures will be saved to the local albums, you can check it through the button  → "Albums".

④ Microphone

Open or close mic for talking.

⑤ Video Record

Record a video. The video will be saved to your phone, you can check it through the button  → "Albums".

- For IOS devices, please check screenshots and videos on your phone's "Photos" - "Albums".

⑥ Pan Tilt

You can swipe the live view to control the direction of the camera.

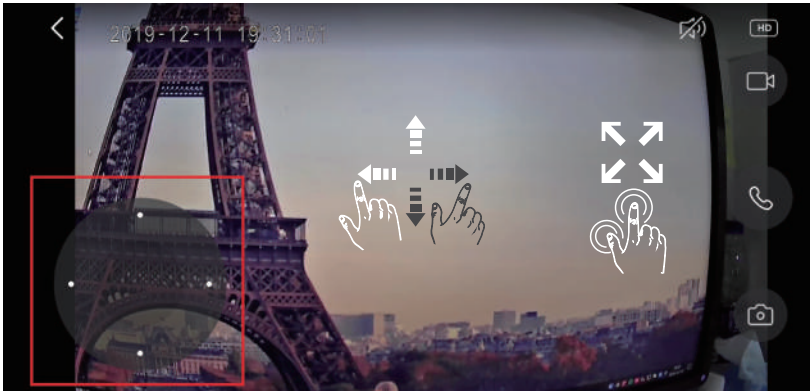

⑦ Zoom in

Double-click or expand with two fingers and zoom in the live view.

⑧ Full Screen Mode

In full screen, you can use the circular control panel in the red frame to control the camera. You can also control it by **swipe**, **double-click**, **zoom in the view by expanding with two fingers**.

5.2 Control Panel

① Cloud Storage (Optional)

After purchased this service, the device can encrypt and upload video that records motion based on moving-object detection to cloud storage, and you can view the recorded video on App at anytime, anywhere.

- If you buy a cloud service, the video triggered by motion detection will be saved to the cloud by default.
- If a SD card is inserted, the motion detection video will be saved to both Cloud storage and SD card.

- **We will provide a discounted price of \$ 0.01 for first month experience.**

② Direction (Pan & Tilt)

You can turn the camera by using the direction penal.
Note: Due to the network environment, the rotation of the camera may not be rotated smooth and the stream of the live video may be delay.

③ Preset

Click "+" to preset the specific position for this camera, the original position for this camera. The position can be saved, called and deleted. You can add multiple recorded positions to realize fast location.

④ Site

Calling a preset position: Click the picture directly, the camera will automatically turn to the specific direction you saved.

⑤ Automatic Patrol

You can set up automatic patrol, the camera will rotate itself to patrol and it will record a video when motion detection happens.

This is a powerful intelligent function that can be used only if you purchase cloud service or turn on SD card recording function.

Motion Tracking: The camera will detect moving object and track it automatically.

Patrol Mode:

- **Panoramic Cruising:** The camera will automatically cruise through every angles.
- **Site Cruising:** The camera will scan through all preset site, staying at each location for 10 seconds. (If you open "Motion Tracking", the moving-objects detection will take priority).

Note: This option requires the preset site.

Auto-patrol Time:

- **All-day Patrol:** In this mode, camera will patrol 7x24 hours.
- **Timed Patrol:** In this mode, camera will patrol according to scheduled time.

6. Video Playback

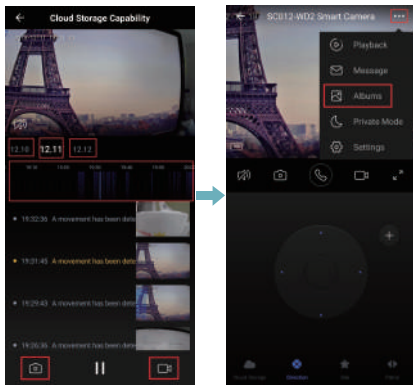

The video playback of the cloud video and the SD card video can only be played separately.

6.1 Cloud Video Playback

- ① Click the camera name to go to the LIVE view, click "Cloud Storage" → "View more". The **blue timeline** means video recorded; The **gray timeline** means no video recorded; Select the date or drag the timeline to play the records.

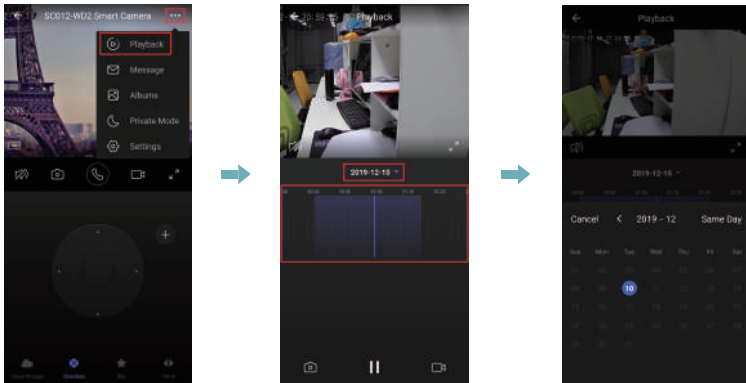

- ② Click the button  to take a screenshot of the playing video, which will be saved to your phone. Click the button  to record a video, the video will be saved to your phone too. Click  on the top right, then go to "Albums" to check the screenshot and video.
- For IOS devices, please check it on your phone's "Photos" - "Albums".

Note: The records on the cloud storage can't be deleted manually to prevent of the accidental deletion. The video will be automatically overwritten and the storage time vary from your purchased cloud service. Once the cloud service expire, all the video stored in the cloud will be automatically deleted.

6.2 SD Card Video Playback

- ① Click the button **...** on the top right → **"Playback"** to enter the video playback page.
It will replay the recorded videos of the camera on SD card. The **blue timeline** means there has recorded video; The **gray timeline** means there has no recorded video.
Select the date or drag the timeline to view the records.

7. Advanced Setting

7.1 SD Card Recording

Click camera name to go to the LIVE view, then click the  → "Settings" → "Memory Card Settings" to set up.

① Requirements for SD Card

- Click "Add Sharing" to add the user's phone number → "Done", **then the camera will be automatically added to the user's account which is no need to wait for the user to join in.**
- The shared users can only use cloud savings, direction control, video playback in SD card, and choose talk mode.

Note: The shared users also need to download the SkyGenius App and register an account.

9. FAQ

(1) Is it safe to store data in cloud services?

Yes it is, because we are using Amazon's cloud storage.

(2) Do I have to subscribe the cloud service package to use this camera?

- ① It's unnecessary to subscribe the cloud service package. But we offer a 30-day cloud service, which only cause 0.01\$. You can use the SD card for video recording after the expiration, otherwise, you can only watch the live view. The renewal price is the market price.
- ② To ensure a better experience and safer storage, please renew before expiration of cloud service you have subscribed, otherwise, please insert an SD card in time instead to avoid the interruption of video recording. Please back up the important videos in the Cloud Service in time to avoid all the videos deleted after expiration.

(3) Why can't I get the notifications on my phone?

- ① Make sure you allow SkyGenius APP to send you notifications in the Settings of your mobile device.
- ② Make sure you switch on all the options in Push Notification Settings.

(4) Why does the camera make noise?

When the camera rotates, the motor will make a weak sound, then the App will record the voice came from the camera's microphone. It can be stopped by switching off the "Sound" option on the live page, or switching off the Microphone in the Setting. In addition, a loud noise occur when the mobile device is very close to the camera. The noise will stop when you move the mobile device away from the camera. If the camera makes unusual noise that cannot be eliminated, please contact us.

(5) Does this camera have infrared night vision?

① Yes, under normal circumstances, this infrared night vision is automatically activated. If you want switch off infrared night vision, you can go to "Settings" → "IR Night Vision" to turn it off.

(6) How can I watch the SD card videos on the mobile device and computer?

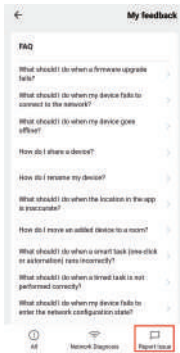

- ① If you want to play video on the phone, please insert the SD card into your phone that equipped with a card slot.
- ② If you want to play video on the computer, please insert the SD card into the card reader or copy the videos to the computer, then watch them with the player which supports MP4 format.

(7) What can I do if APP shows "Uh-oh! Device disconnected"?

Make sure the camera is powered on, the router works well and restart the camera. If the camera still disconnects, please remove the camera from the App, then connect it again.
