UK Battery Storage Project Database report

Energy storage has now become one of the most exciting and dynamic new growth areas within the global energy sector. The UK in particular has emerged as one of the top-3 global markets for storage deployment over the next few years.

With many companies seeking to benefit from battery storage deployment, knowledge of the sites and companies driving the market growth is extremely important

The *UK Battery Storage Project Database* report provides comprehensive details across more than 300 battery storage projects, including:

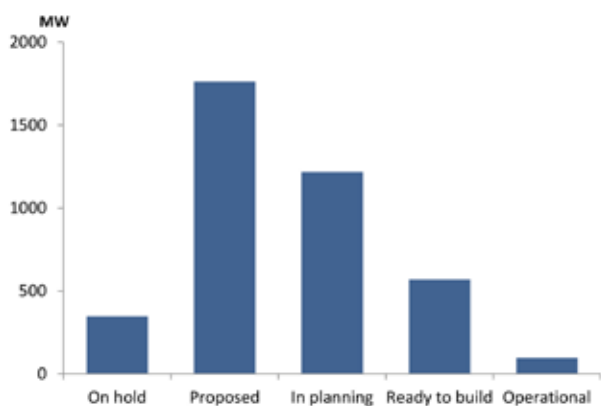

- ✓ Key information on location and planning status of projects
- ✓ Company information for each project and visibility of pipelines
- ✓ Information about co-located generation sites and details of grid connections
- ✓ Progress of projects offering grid services to National Grid and any other mechanisms that become open to energy storage projects

Report Contents

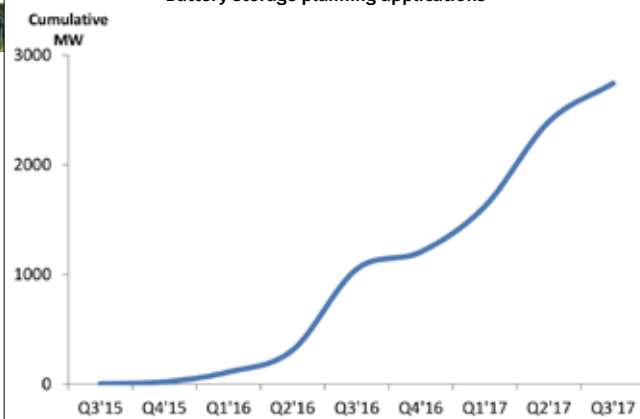

Site details	Companies and technology	Location	Planning and grid	Revenue and status
Solar Media Ref #	Special Purpose Vehicle (SPV)	Postal Address	Planning Reference	Expected Revenue Stream
Site Name	Original Developer	Postal Town	Planning Authority	2016 EFR Status
Planned Capacity MW	Planners	Post code	Application Status	CM T-4 2016
Capacity MWh	EPC/Integrator	County	Application Submission Date	EA 2017
	Final Developer	Country	DNO Region	FFR
	Battery Technology type	Eastings	Grid Connection Type	Funding Route
	Proposed Battery supplier	Northings		Build Closure Status
	Energy Management System Supplier			Completion year
	Aggregator			
	Co-located technology			

Project status (MW)

Battery storage planning applications
