

Description

As the name suggests, Bench Fitness Abram Sled is an absolute TANK! Built with heavy duty steel this monster sled weighs in at 73kg. With a variety of handles, the Bench Fitness Abram Sled is the ultimate conditioning tool. Athletes can push the sled using the tall vertical handles or either of the horizontal handles to change things up. If athletes want to change it up even more, the Bench Fitness Abram Sled also has an attachment point for harnesses and ropes. And just in case that isn't enough variety, you can add a standard bumper plate vertically to the front horizontal pin to turn the Bench Fitness Abram Sled into a heavy duty wheelbarrow.

Made from 8 mm plate and 75 x 50 x 3.2 mm box tube, the Abram Sled is heavy and unbreakable. Designed using our Built Strong philosophy, the Bench Fitness Abram Sled will stand the test of time and take whatever you can throw at it.
