Common Questions

Are there any steps you can take to reduce your risk?

What if I have a family member with a condition related to this test?

Can I take steps to prevent certain cancers?

The next steps to take are to share the results with your doctor or other healthcare professional and have a discussion about your options. You may want to consider genetic counseling and other services to help you understand your results and how they may affect your health. You can also choose to talk to your family about your results and how they may affect their health.
