PRODUCT OVERVIEW

Alpine's first premium dash camera system has the highest quality recording of accident footage and license plate capture so you can drive with confidence and quickly access your drive recordings.

PRODUCT FEATURES

1080p Full HD Recording – No matter the driving condition, the DVR-C310R captures the footage of your drive in full 1080p HD with a 140° viewing angle. Wide Dynamic Range (WDR) technology automatically adjusts the exposure and white balance for a clear recording during sudden lighting changes.

Impact Triggered Recording – The DVR-C310R doesn't stop recording after the engine is turned off. When parked, the DVR-C310 enables impact triggered recording and will record up to 10 seconds after impact.

Dual-Camera Configurations – The DVR-C310R includes a secondary camera for an additional recording device anywhere in the vehicle. Use the secondary camera to monitor activity inside the cabin or point it towards the rear of the vehicle for rear-video footage.

Monitor Your Vehicle on the Go – Footage captured by your DVR-C310R can be viewed on your smartphone with the free ALPINE Recording Viewer app. View real-time recording around your vehicle with Live View or review past recordings with the File List option.
