

DLH Designs basin are completely sealed to protect against stains and ingress of water. As explained in our care instructions and warranty, our sealer (depending on level of use and care) is expected to wear over time.

For those who would like to add an extra level of protection to your basin we recommend waxing your basin. Waxing your basin will also add a renewed level of shine to basins that have dulled over time.

---

### **APPLYING WAX TO YOUR BASIN**

Endure surface is clean and dry.

Using a lint free cloth, apply an approximately 20 cent piece sized amount of wax evenly all over the interior surface of your basin.

Buff back with a clean lint free cloth.

Apply 2-3 coats buffing in between each.

We recommend applying wax to your basin around every 3 months depending on the basin's level of use.

### **PURCHASING MAINTENENCE WAX**

Wax is available to purchase in 50ml tins from DLH Design's website.
