

## NEW RELEASE

When OREX introduce a new product release the benchmark is that the product must meet the original equipment standard or better. The OREX range of brake camshafts to suit trailer applications covers Hendrickson, Meritor, KHitch, TMC & York axles.

The camshafts are forged from high quality carbon steel rod and heat treated on both the journals & spline end to ensure the brake forces it endures maintains braking performance & safety. The camshaft is also machined to original equipment specifications for longer service intervals.

Matched with the other OREX brake foundation product portfolio makes good sense when you do your next brake service.

Please go to: [www.sxtrailers.com.au/collections/types?q=Camshafts](http://www.sxtrailers.com.au/collections/types?q=Camshafts) for specific application details.

Also, don't forget the range of manual & automatic slack adjuster to suit the range of OREX camshafts.
