

MANGrove Propagule Collection Guide

*Help Us Restore Florida,
One MANG at a Time.*

Hey MANG, thanks for helping the cause

Mangroves not only help preserve and protect Florida's coastal ecosystems, they are essential habitat to 70% of marine life and an insulator against hurricane storm surge.

That's why MANG® is leading the way in growing and planting mangroves across the state of Florida, and globally, through our **Buy One. Plant One.®** initiative.

And just by collecting **collecting red, white, and black mangrove propagules** in the wild, you can help us be a part of the change too, MANG. It's super simple!

Where to find good MANGs in the wild

You can collect free-floating **red, black, and white mangrove propagules** while walking on the beach, kayaking, paddle boarding, or boating along creeks and waterways. Look for areas where mangroves tend to gather, such as dead-end canals.

Remember, **you can't collect propagules from state parks, national parks, or directly from trees!** Always check your surroundings to make sure you're not in a protected park, and let's let those MANGs drop their propagules before we scoop 'em up!

Black MANGs

Red MANGs

White MANGs

Healthy MANGs

Floating MANGs

Avoid any propagules that are dried out, cracked, or appear to be dead. These look great!

Snag floating MANGs above mean low tide.

Rooted MANGs

Dangling MANGs

Protected Parks

These MANGs are already growing naturally and doing their thang, MANG!

How to store your MANGs

Storing 1–3 Days

Store your red, black, and white MANGs **dry in a bucket standing straight up or stack 'em up, no water needed**—it's that simple! Let us know if you need a bucket and we'll hook you up, MANG.

Storing 4–10 Days

If you are keeping your MANGs for more than 3 days, then store them upright in a bucket with 5 inches of water. Make sure to **keep the lid off** so they can breathe (and to eliminate that low-tide funky smell), and make sure to keep refilling the water as needed.

Storing 1–3 Days

Stack 'em or just toss 'em dry in the bucket and cover with a lid to keep the moisture in.

Storing 4–10 Days

Fill with 5 inches of water with the lid off to let them breathe.

Where to drop your crops

Once you've got your MANGs collected, **check the website for the location nearest to you.**

Just give them a ring before driving over to let them know you're coming and coordinate your drop, MANG.

**Thanks for helping us save
the world one mangrove at
a time, MANG.**

Any questions? Give us a shout!
