

Thank you for choosing “AM studio” production! Our continued commitment lies in the complete satisfaction of each and every product we produce and deliver to our customers.

The main material Art glass studio “AM studio” works with for several decades is glass - everlasting material that, if properly used and cared, will serve you for a lifetime, it does not change shape or color, does not succumb to the processes of corrosion and putrefaction, it can only be transformed when the earth is on fire.

### GLASS WASHBASIN CARE AND CLEANING INSTRUCTIONS

Handcrafted “AM studio” glass washbasins are functional work of art, beautiful and made to last. However, they are not indestructible. We recommend a few simple precautions to keep your washbasin in good condition for many years to come.

- Prior to installation, please store your washbasin in its box in an area where it is protected from extreme temperature changes. When you are ready to install, use care in handling your new piece of art.
- After installation, exercise proper care of the glass surface. Prevent contact with hard, sharp or abrasive objects both inside and outside the washbasin.
- Daily care requires nothing more than wiping of washbasin surface with non-abrasive cleaning agents such as glass cleaners, soapy water or a damp cloth.
- For surface staining, soapy water or ammonia-based cleaners will usually do the job.
- The outside of the washbasin has a tough coating that protects the decorative finish against normal wear, so do not use any commercial glass cleaners as well as abrasion cleaners.
- The washbasin is subject to stress at the point of attachment. Avoid putting excessive pressure on the rim of the washbasin, as overstressing the glass can cause cracks at the base.
- It should also be noted, that glass washbasins are subject to thermal stresses that can cause cracks. Thermal stresses occur when the glass is heated or cooled too suddenly or to extreme temperatures. Water in the washbasin should not be overly hot or cold, nor should it be allowed to change temperature too quickly.
- Do not pour water into the washbasin that is too hot to touch. Moderate the water temperature, either by turning on both hot and cold simultaneously, or by adjusting your water heater to an appropriate level.
- Do not install a washbasin with an instantaneous water heater, as the extreme heat will create great stress on the glass.

Our 2-year manufacturer warranty offers our customers peace of mind knowing that our products are guaranteed to be free of defects — in both materials and workmanship. In order to be eligible for the warranty, the product must be cared and cleaned in accordance with the accompanying Care and cleaning Instructions. We stand by our products. If something goes wrong, we do our best to help solve the problem.

Sincerely,  
“AM studio” team
