

# FULLY DRESSED TREBLE

ASSEMBLED BY: Lorie Hagen

Chironomids are one of the most abundant insects and found in nearly every body of freshwater in North America. Because the hatches are so large they are one of the most important insects in the food chain as far as many species of fish are concerned. When fish are feeding on Chironomids they cruise through the clouds of emerging insects gulping huge mouth full. That is when you want to have a few of these ready to go in your fly box.

## MATERIALS NEEDED:

**HOOK | DAAICHI DEATHTRAP TREBLE HOOK | SZ 1**

**THREAD | Fly master | 6/0 | Black**

**TAILS | Angel Hair | Silver Holo**

**BODY/WING | Angel Hair | Red**

**CEMENT | Soft Body Thin**

### Step 1

Start by building up a good solid base of tying thread to anchor your materials to the hook. Next begin tying in the Silver Holo Angel Hair for the tail in place. Cut a small amount of the Silver Holo Angel Hair the desired length and divide it into 3 roughly equal clumps. Tie one clump into each side of the treble hook and trim it to the desired length. (I prefer the tail be roughly the length of the hook.)

### Step 2

Hair and divide it into 3 roughly equal clumps for the wings. Again tie one clump into each side of the treble hook. Only this time you will want to tie it in backwards with the long tip pointing to the eye of the hook.

### Step 3

Once all 3 clumps of Red Angel Hair are tied in with the long tips pointing forward fold each one back and tie it in place with the long tips pointing towards the bend of the hook. When all 3 have been tied down pointing back finish wrapping the head, whip finish, tie off and trim the Angel Hair to length. Finish with Soft Body.

The material used to recreate this can be found at: [www.hagensfish.com](http://www.hagensfish.com)

## THE NEWS AROUND HERE

August found us in Reno, Nevada for the **International Fly Tackle Dealer show**. The show was held in the Convention Center from August, 16- 18th this year. There was a lot of excitement about all of the new products from rods and reels, to tying material and clothing. They even had two casting ponds set up within the building so that we were able to try out the new rods. I took a short lesson on casting a Spey Rod.

Overall it was a great show for us. We're excited about the new ideas we came back with for all of the new items we will add to our catalog.
