

Brushguard[™]

simply a better gutter guard

Now there is a smarter way to maintain efficient water flow in your gutters while keeping leaves out..

Brushguard is a three dimensional one metre long bottle brush that simply slides into the gutters & can bend around corners. It's easy to remove & re-install for simple maintenance on the gutter & valleys. Brushguard's prickly bottle brush like body helps to deter birds, rats, mice, & snakes away from the gutters & ceilings. If you own a water tank & have Brushguard in the gutters, less debris is stirred up creating cleaner more usable drinking water.

Benefits

- Easy installation.
- Removable for gutter maintenance.
- No glue or screws needed.
- 100% Australian made.
- 10 Year Manufactures Warranty.
- Sizes to fit all gutter profiles.
- Ideal for rainwater collection.
- Prickly body deters rodents & birds.
- Only do leaf affected areas.
- Suits tiled and iron roofs.
- High quality, long life, material.
- Double UV treated polypropylene.

Easy to maintain

So easy - just lift, shake, hose & replace

Brushguard gutter guard

Ideal for collecting water for a tank, pool or spa. Less dust and debris is stirred up when water enters the gutter, brushguard allows the water to run down the bristles and "soft fall" into the gutters.

Water flows through the bristles even when there are leaves on them. In the worst conditions water continues to filter through.

Conventional single plane gutter guard

Any water that does get through traditional gutter protection, stirs up the debris creating a sludge which increasing the chance of contaminated water & rusting gutters.

Leaves can form a seal over single plane gutter systems making it less effective. Water flows over the leaves and off the edge of the gutter.

Brushguard is available in one metre lengths to suit most gutter profiles. Check which profile best matches the gutter, note the front height & bottom width of the gutter, helping in selecting the right one

Profiles (most common)

Hi-front quad	Suit 150 mm (6") quad	Square front & Mini-line 110 front	Square front 125mm base
Part No: BG110Q	Part No: BG125Q	Part No: BG125R	Part No: BG110R

Fitting Instructions

For best results, clean gutters of debris & silt then slide the Brushguard in end to end. For gutter bracket if the centre wire is above go over if below go under. At corners bend to suit, at the end or a stop cut to size with wire cutters, allways use silicon over any cuts made in the wire. There is no need to adjust tiles or cut back the roof sheeting, as Brushguard can be pushed through the gap of just 20mm and the bristles will spring back to do their work of protecting the gutters. No existing gutter guard can stop dirt and dust building up as silt in the bottom of your gutters. Silt holds moisture and if not flushed out causes rapid corrosion of your gutters, so ease of access for cleaning is essential. With Brushguard simply lift out when necessary, shake the brush hose and flush out the silt, and replace. It's really that easy!
