

Luxatemp[®]

Preferred by dentists, loved by patients

Perfect provisionals

Developed by DMG more than 20 years ago, Luxatemp® was the first bisacryl provisional material introduced as an automix material in the U.S. and Canada. Today, it remains the system of choice for clinicians to produce esthetically superior, lifelike provisionals.

Whether it's award-winning Luxatemp Fluorescence's superior esthetics, Luxatemp Ultra's flexural strength and break resistance, Luxatemp Solar's extended working time or the proven reliability of Luxatemp Plus, the complete DMG family of provisional materials continues to deliver unmatched clinical results and premium quality to meet the needs of dentists and patients alike.

Luxatemp Ultra

Rated #1 in flexural strength*

Luxatemp Ultra continues to deliver the unmatched esthetics synonymous with the Luxatemp name. Along with superior color stability, it includes fluorescence to create temporaries that look more like natural teeth in all lighting conditions.

FEATURES & BENEFITS

- Industry leader in flexural strength
- Unsurpassed break resistance
- Faster curing, easier cutting and handling for greater clinician control
- Fluorescence added for outstanding esthetics
- Superior stability and long-term durability

Luxatemp Fluorescence

Naturally esthetic

- Natural fluorescence
- Lifelike provisionals look great in all lighting conditions
- High fracture and abrasion resistance
- Durable, long-lasting temporaries
- Excellent marginal adaption
- Easy to remove
- Minimal shrinkage during polymerization
- Outstanding color stability

FLEXURAL STRENGTH

Measurements carried out at Erlangen University Clinic showed outstanding flexural strength values for Luxatemp Ultra.¹

LUXATEMP ULTRA PHYSICAL PROPERTIES

Chemistry: bisacryl

Mixing ratio (base/catalyst): 10:1 (vol.)

Compressive strength*: 376 MPa

Transverse strength*: 125 MPa

Diametrical tensile strength*: 52 MPa

Barcol hardness*: 59

Water sorption: 10µ/mm³

Temp. rise during polymerization: 39°C/102°F

*After 24 hours

* "Flexural Strength of Provisional Restoratives," a comparative study; Perry R., et al

Everybody has a favorite

Luxatemp Automix Plus

- Durable and long-lasting provisionals
- Exceptional precision fit
- High biocompatibility
- High break resistance
- Excellent flexural strength
- Low shrinkage during polymerization

Luxatemp Solar

- “Cure-on-demand” for extended working time
- Easy removal during elastic phase
- High final hardness
- Low shrinkage during polymerization
- Excellent polishing properties

Complete your provisional system

TempoCem[®]ID Temporary Cement

Invisible under restorations, yet detectable for excess removal

- Beautiful esthetics thanks to optimal transparency
- Easy one-piece removal of excess
- Optimal adhesion with easy removability
- Eugenol free
- Excellent ease of use, no sticking to instruments
- Flows and mixes easily
- Perfect for long-term temporaries

LuxaFlow[™] Ultra/LuxaFlow[™]

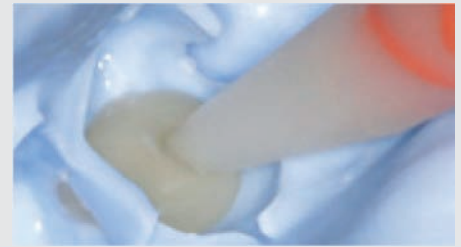

Ideal for lifelike repairs

- Optimum flow characteristics
- Highly polishable
- Non-slumping formula
- Light cured
- Radiopaque

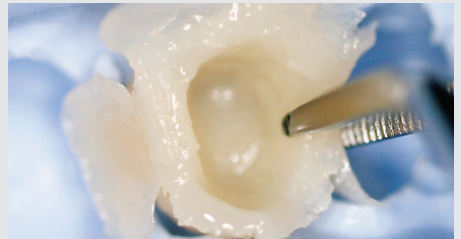

LuxaGlaze[®]

For a high-gloss finish

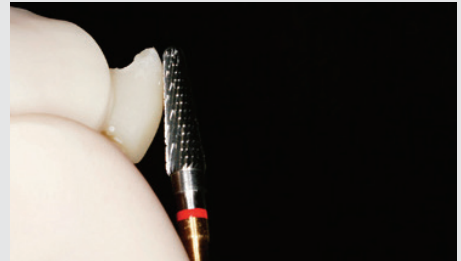

- High gloss shine without polishing
- Greater protection, stain-resistant
- Exhibits lifelike appearance
- Enhances temporary esthetics
- Quick and easy application
- Light cured

Luxatemp Ultra material being dispensed into a StatusBlue[®]* matrix.

Removing the temporary from the matrix.

Refining the temporary with a bur.

A highly esthetic, natural-looking temporary end result.

*StatusBlue alginate replacement
