

**SCOTT MILLER
DDS**

Dr. Miller, a graduate of the University of Illinois College of Dentistry, practices general dentistry in Skokie, IL. He is a long-time member of the ADA, Illinois State Dental Society, and Chicago Dental Society, and a Fellow of the Academy of General Dentistry, a level of distinction he achieved with over 30 years of dental continuing education. He was a long-time volunteer for Goldie's Place, a nonprofit organization that offers multiple levels of help to the homeless, including dental services.

All-Bond Universal

A versatile adhesive compatible with light-, self-, and dual-cured resin composite and cement materials

The culmination of over 30 years of research by BISCO, All-Bond Universal is known for its bond strength, simplicity, and versatility, as it can be used with direct and indirect restorations and is formulated to be compatible with light-, dual- and self-cured materials.

Over my years of practicing dentistry, I've successfully used many different BISCO products. My positive experience with those products, along with the knowledge that the company spent over 3 decades performing research to develop a universal adhesive, made trying All-Bond Universal adhesive an easy decision. I'm so glad I did. It's been the most consistent product for all my bonding needs, which is why I continue to trust its performance year after year. I consider it essential to my practice.

Universal and Versatile

As a universal adhesive, I use it with both direct and indirect restorations no matter how small or large. It works well with all light-, self-, and dual-cured resin composites as well as cements. As a single-bottle system, it is simple to use, quite strong in its bonding, and offers me true flexibility in total-,

self-, and selective-etch procedures. I have been very happy with the results. In fact, I've never had a bad result.

Ideal Wetting Properties

Because the product is not moisture sensitive, I can use it on any tooth structure, whether dry, wet, or moist. This is so important. I have total confidence that the bonding resin will get into the dentinal tubules and onto the etched enamel to form the bond properly when I use All-Bond Universal.

No Sensitivity Complaints

BISCO is right on target when they say this product has virtually no post-op sensitivity. I've previously had that issue, and when that happens it is problematic both for the patient and my office with regards to scheduling. In fact, I've never had a patient complain about this in all the years I've been using All-Bond Universal.

A Bond You Can Rely On

All-Bond Universal is a dependable adhesive that offers consistently wonderful results—at a great price. I'm confident that anyone using this product will also have the same experience as me.

6 REASONS TO USE ALL-BOND UNIVERSAL:

- Excellent bond strength to all substrates
- Compatible with all resin cements
- Not moisture sensitive
- Use with all direct and indirect restorations
- Ideal chemical balance for both total- and self-etch adhesion from one bottle
- Virtually no post-operative sensitivity
